Suggested Answers to Chapter Review Questions

This document provides initial answers to review questions from chapters 1 through 8. The purpose of review questions is to practice and rehearse key biomechanical concepts, principles, and laws. Students are encouraged to study the topics related to each question in greater depth and use the sample exam questions in their preparations for examinations.

The discussion questions in Chapters 9 through 12 are designed for students and instructors to discuss. Discussion questions are ideal for small group brainstorming and practice in qualitative analysis of human movement.

Chapter 1

1. Biomechanics is the study of how living things move using the science of mechanics. In the first half of the 20th century this was synonymous with kinesiology, but now kinesiology is the academic discipline of the study of human movement.

2. Biomechanics is useful for solving problems related to the technique used in movement, and specifically to improve performance or prevent/treat injury.

3. The advantages of qualitative biomechanical analysis are their ease of use and flexibility, but the weaknesses are related to subjectivity and reliability.

4. The advantages of a quantitative biomechanical analysis are the precise documentation of movement and the biomechanical variables that created the movement. The disadvantages are the high cost, time, and complexity of these measurements and analysis.

5. A wide variety of journals publish biomechanics research. These journals include specialized biomechanics, engineering, biology, medicine, strength and conditioning, kinesiology, and sports medicine journals.

6. Information is a message or observation with unknown levels of accuracy. Knowledge is comprised of the contextual, theory-based, and data-supported ideas that make the best current explanation for reality. Scientific knowledge is the laws, principles, and observations that result from a consensus of scientists in that field.

7. Biomechanics must be integrated with other kinesiology sciences because people are not robots that move without regard to environmental factors. Psychological, physiological, and perceptual issues are all examples of factors that might be more important than biomechanical factors in some situations.

Chapter 2

1. Biomechanics has traditionally been focused on rigid body and fluid mechanics.
