Mikkelsen, Gavin Sulewski, Robert Norton, Michael L. Thompson, 2020-12-14 This open access book highlights concepts discussed at two international conferences that brought together world renowned scientists to advance the science of potassium K recommendations for crops There was general agreement that the potassium recommendations currently in general use are oversimplified outdated and jeopardize soil plant and human health Accordingly this book puts forward a significantly expanded K cycle that more accurately depicts K inputs losses and transformations in soils This new cycle serves as both the conceptual basis for the scientific discussions in this book and a framework upon which to build future improvements Previously used approaches are critically reviewed and assessed not only for their relevance to future enhancements but also for their use as metrics of sustainability An initial effort is made to link K nutrition in crops and K nutrition in humans The book offers an invaluable asset for graduate students educators industry scientists data scientists and advanced agronomists *Advances in Genetics* , 1947-01-01 *Advances in Genetics* **Agroecosystems of South India** K. R. Krishna, 2010 Agroecosystems of South India is a unique treatise that deals with the relevance of natural resources genetic stocks fertilizers and agronomic practices on the productivity of agroecoregions Within the context of this book an agroecosystem has been defined as a conglomerate of small

cropping zones which may be mono cropping expanses or intercrops that occur in various geographic regions of South India South India abounds with several such agroecosystems that encompass field crops vegetables cash crops plantations and forest species However the main emphasis within this volume is restricted to agroecosystems that include major cereals legumes and oil seed crops There are 10 chapters in this volume The first on historical aspects traces important events related to domestication introduction of crop species agricultural implements development of soil fertility and crop husbandry procedures An introductory chapter on Agroecosystems delineates various agroecoregions of South India Their classification based on physiography soils and climatic parameters have been dealt with in great detail Descriptions on natural resources such as soils and their fertility conditions water resources climatic conditions including precipitation patterns and crops and their genotypes are available in chapter 2 The impact of soil fertility and nutrient dynamics on ecosystematic functions and productivity of crops in an agroecosystem forms the central piece of discussions within chapters 3 to 9 Historical background geographical settings agroclimate soils cropping systems and productivity trends have been provided for each cropping ecosystem Recent advances and details on aspects of nutrient dynamics such as soil nutrients their availability physico chemical transformations nutrient fluxes inorganic fertilizer supply organic manures crop residue recycling nutrient carry over and nutrient balances imbalances form the core of each chapter The impact of beneficial soil microbes such as Rhizobium Plant Growth Promoting Rhizobacteria and Arbuscular Mycorrhizas on nutrient dynamics in soil has also been discussed More recent developments dealing with modeling nutrients in cropping ecosystems computer based simulations precision farming and site specific nutrient management have been emphasized Forecasts on the impact of nutrient dynamics on the future course of agroecosystems are also available Overall this book is a scholarly edition that aims at providing an excellent exposition of recent developments within various agroecosystems of South India to a global audience It highlights the importance of soil fertility and nutrient dynamics within agroecosystems to total food grain and fodder production in South India It will be a useful book to researchers professors and students dealing with agriculture environmental science ecology and plant science

Amino Acids of the Glutamate Family: Functions

beyond Primary Metabolism Sakiko Okumoto,Dietmar Funck,Maurizio Trovato,Giuseppe Forlani,2016-10-07 The life of proteins starts and ends as amino acids In addition to the primary function as protein building blocks amino acids serve multiple other purposes to make a plant's life worth living This is true especially for the amino acids of the glutamate family namely glutamate Glu glutamine Gln proline Pro and arginine Arg as well as the product of Glu decarboxylation aminobutyric acid GABA Synthesis accumulation interconversion and degradation of these five compounds contribute in many ways to the regulation of plant development and to responses to environmental challenges Glu and Gln hold key positions as entry points and master regulators of nitrogen metabolism in plants and have a pivotal role in the regulatory interplay between carbon

and nitrogen metabolism Pro and GABA are among the best studied compatible osmolytes that accumulate in response to water deficit yet the full range of protective functions is still to be revealed Arg with its exceptionally high nitrogen to carbon ratio has long been recognized as a major storage form of organic nitrogen Most of the enzymes involved in metabolism of the amino acids of the glutamate family in plants have been identified or can be predicted according to similarity with animal or microbial homologues However for some of these enzymes the detailed biochemical properties still remain to be determined in order to understand activities in vivo Additionally uncertainties regarding the subcellular localization of proteins and especially the lack of knowledge about intracellular transport proteins leave significant gaps in our understanding of the metabolic network connecting Glu Gln Pro GABA and Arg While anabolic reactions are distributed between the cytosol and chloroplasts catabolism of the amino acids of the glutamate family takes place in mitochondria and has been implicated in fueling energy demanding physiological processes such as root elongation recovery from stress bolting and pollen tube elongation Exceeding the metabolic functions the amino acids of the glutamate family were recently identified as important signaling molecules in plants Extracellular Glu GABA and a range of other metabolites trigger responses in plant cells that resemble the actions of Glu and GABA as neurotransmitters in animals Plant homologues of the Glu gated ion channels from mammals and protein kinase signaling cascades have been implicated in these responses Pollen tube growth and guidance depend on GABA signaling and the root architecture is specifically regulated by Glu GABA and Pro signaling or metabolism were shown to contribute to the orchestration of defense and programmed cell death in response to pathogen attacks Pro signaling was additionally proposed to regulate developmental processes and especially sexual reproduction Arg is tightly linked to nitric oxide NO production and signaling in plants although Arg dependent NO synthases could still not be identified Potentially Arg derived polyamines constitute the missing link between Arg and NO signaling in response to stress Taken together the amino acids of the glutamate family emerge as important signaling molecules that orchestrate plant growth and development by integrating the metabolic status of the plant with environmental signals especially in stressful conditions This research topic collects contributions from different facets of glutamate family amino acid signaling or metabolism to bring together and integrate in a comprehensive view the latest advances in our understanding of the multiple functions of Glu derived amino acids in plants
