Handbook of Psychology, Assessment Psychology Irving B. Weiner,John R.

Graham, Jack A. Naglieri, 2012-10-16 Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology. Choice, Decision, and Measurement A.A.J. Marley, 2019-05-23 This volume is the result of a conference held at the University of California Irvine on the topics that provide its title: choice, decision, and measurement. The conference was planned and the volume prepared in honor of Professor R. Duncan Luce on his 70th birthday. Following a short autobiographical statement by Luce, the volume is organized into four topics to each of which Luce has made significant contributions. The book provides an overview of current issues in each area and presents some of the best recent theoretical and empirical work. Personal reflections on Luce and his work begin each section. These reflections were written by outstanding senior researchers: Peter Fishburn, Preference and Decision Making; Patrick Suppes, Measurement Theory and Axiomatic Systems; William J. McGill, Psychophysics and Reaction Time; and W. K. Estes, Choice Identification and Categorization. The first section presents recent theoretical and empirical work on descriptive models of decision making and theoretical results on general probabilistic models of choice and ranking. Luce's recent theoretical and empirical work on rank and sign-dependent utility theory is important in many of these contributions. The second section presents results from psychophysics, probabilistic measurement, aggregation of expert opinion, and test theory. The third section presents various process-oriented models with supportive data for tasks such as redundant signal detection, forced choice, and absolute identification. The final section contains theory and data on categorization and attention and general theoretical results for developing and testing models in these domains. Manual for Soil Analysis - Monitoring and Assessing Soil Bioremediation Rosa Margesin, Franz Schinner, 2005-12-15 Reliable methods for monitoring and assessing soil quality are a prerequisite for successful soil bioremediation projects. The fifth volume of Soil Biology presents detailed descriptions of selected methods for evaluating monitoring and assessing bioremediation treatments of soils contaminated with organic pollutants or heavy metals. Traditional soil investigation techniques including chemical, physical, and microbiological methods are complemented by the most suitable modern methods such as the use of bioreporter technology, immunological, ecotoxicological, or molecular assays. Feasibility studies for bioremediation treatments complete the manual. Easy-to-follow protocols with step-by-step procedures, lists of the required equipment and reagents, as well as notes on the evaluation and quality control, allow immediate application. Short introductions to the principles and objectives help to assess the field of application of each procedure.
