Data And Society Paul Beynon-davies, 2021-07-27 Most literature thinks of the relationship between data and society as additive meaning that data and society are seen as two separate sets of things but which overlap to form an intersection The literature then goes off to unpack the intersection of the two circles and partners the term data in this manner with terms descriptive of the domain of society ownership control surveillance and privacy to name but a few Within this book we want to promote an alternative viewpoint of the relationship between data and society Rather than explaining how data fits with or contributes to some burning societal issues we want to explain how data is constitutive of many such issues The term constitutive is used here in the sense of data having power to institute establish or enact society Our viewpoint means that if you are to properly understand the constitutive nature of data you must start from first principles and closely examine the nature of data itself You must also focus on the mechanics of data how data is represented and articulated in records or more generally in data structures Our aim in doing this is to examine the place of data structures across cultures and societies In doing so we hope to better understand why we as humans make records In doing this we can also better understand some of the unintended consequences of the use of records which particularly plague us in the modern world
