

OPERATIONS MANAGEMENT

Operations management is a main function in each and every organization. Operations management is found in all organizations be it in the service or production, or in the public, private or voluntary sectors (Render and Heizer 2011, p. 36). Operations management is associated with production, creation and distribution of goods or services. Operations management plays an important role in every organization simply because it manages all the actual performance of the organization. Operations management operates and designs systems for production. These systems are the systems required to get work done. The movies people watch, the food they eat, the shops they go shopping and even the books the people read are all results of operations management (Russell and Taylor III 2003, p 4). Operation management is practically found in every part of any organization. The operation managers ensure quality, design systems, and do the production of goods and delivering of services. They solve problems, innovate and reengineer process. It is more of planning than controlling. This is usually because the operations management controls and plans all the activities that are conducted in the organization.

Operations management is usually considered as the process of transformation. Inputs such as materials, capital, management, machines and labor are changed into outputs which are services and goods. Operations management tries to ensure that transformation is efficiently performed to produce more outputs than the inputs have been used. This is to show that the transformation process creates value. The chain starting from the inputs to the transformation to the output process is the main
