Operations Research In Space And Air 1st Edition:

Operations Research in Space and Air Tito A. Ciriani, G. Fasano, S. Gliozzi, Roberto Tadei, 2013-04-18 Operations Research in Space and Air is a selection of papers reflecting the experience and expertise of international OR consulting companies and academic groups. The global market and competition play a crucial part in the decision making processes within the Space and Air industries and this book gives practical examples of how advanced applications can be used by Space and Air industry management. The material within the book provides both the basic background for the novice modeler and a useful reference for experienced modelers. Students, researchers, and OR practitioners will appreciate the details of the modeling techniques, the processes that have been implemented, and the computational results that demonstrate the benefits in applying OR in the Space and Airline industries. Advances in PC and Workstations technology in optimization engines and in modeling techniques now enable solving problems never before attained by Operations Research. In recent years the Italian OR Society AfRO www.airo.org has organized annual forums for researchers and practitioners to meet together to present and discuss the various scientific and technical OR achievements. The OR in Space & Air session of AfRO2001 and AfRO2002 Conferences together with optimization tools applications presented recent results achieved by Alenia Spazio S.p.A. Turin, Alitalia Milan Polytechnic and Turin Polytechnic. With additional contributions from academia and industry they have enabled us to capture in print today's state of the art optimization and data mining solutions.

National Library of Medicine Catalog National Library of Medicine (U.S.), 1966 *Scientific and Technical Aerospace Reports*, 1993 The Sustainability of Air Transportation Milan Janic, 2017-03-02 This book presents for the first time a comprehensive analysis and assessment of the sustainability of the contemporary civil air transport system, examining its three main components: airports, air traffic control, and airlines. It offers an in-depth examination and quantitative insight into the system's current and prospective structure and operations, as well as the related effects and impacts. The sustainability of the air transport system is considered along a global trajectory of growing effects and diminishing and/or stagnating impacts on society and environment under conditions of continuous growth. In doing so, the author examines the situations of users of the system: passengers and freight shippers, air transport operators, airports, air traffic control, and airlines; aerospace manufacturers; local and national communities; policymakers; and the general public. The book possesses the unique and distinctive feature of providing an analysis and assessment of the air transport system's sustainability through elaboration of its technical, technological, operational, economic, social, environmental, and institutional performances and their causality. It is written for advanced graduate and postgraduate students, researchers, planners, stakeholders, and policymakers dealing with the various sustainability issues of the contemporary air transport system.
