Panda,2010-10-01 Paints and their allied products like varnishes enamels pigments printing inks and synthetic resins protect assets from corrosion These are increasingly being used in automotive engineering and consumer durable sectors Paint testing can be done in a number of different ways The fact of the matter is that many industries use several different paint testing methods in order to ensure accurate results Paint should be tested in a wet form for particular properties but also in the dry form Testing of paints generally falls into three categories testing of the raw materials testing of the finished product and performance testing using accelerated weathering and other simulation type methods of evaluation Coatings technologists deal with interfaces of all classes gas liquid as in an aerosol spray liquid liquid as in an emulsion gas solid as in a dry pigment before its immersion in a vehicle liquid solid as in a pigment dispersion and solid solid as when the crystal faces of two different pigment particles are in tight contact Paint scientists are particularly interested in the formation of liquid solid interfaces that are stable in the package that is in the permanent replacement of the air at the air solid interface of the pigment by the vehicle to give the liquid solid interface of the dispersion In coatings and similar products the criteria for best performance particulate ingredients inorganic organic extender and metallic flake pigments and dispersed phase of latexes depends on the size and shape of particles composing the particulate materials The purpose of paint testing is to help and ensure that the minimum requirements for ingredients and material characterization are met by the manufacturer on a batch basis and to help ensure that the formulated product will provide satisfactory performance in the environment Handbook on Paint Testing Methods explains about aspect of gloss specular gloss sheen contrast gloss absence of bloom gloss distinctness of image gloss specular gloss evaluation specular reflectance geometric considerations instrumentation goniphotometers specular glossmeters basic factors producing hiding power refractive indexes of white pigments refractive indexes of organic pigments films for testing preparation of films for test pigments and extenders metallic flake pigments latexes methods for determining particle treatment of data particle size with light microscope etc This handbook elaborates the different testing methods of paints with an understanding of the various tests that can be performed on product performance This handbook will be very helpful to its readers who are related to this field and will also find useful for upcoming entrepreneurs existing industries technical institution etc TAGS Paint and Coating Testing Paint Adhesion Testing

that matter may exist as solids liquids or gases although the dividing line between the states may often be rather blurred this classification has been upset by powders which at rest are solids when aerated may behave as liquids and when suspended in gases take on some of the properties of gases It is now widely recognized that powder technology is a field of study in its own right The industrial applications of this new science are far reaching The size of fine particles affects the properties of a powder in many important ways For example it determines the setting time of cement the hiding power of pigments and the activity of chemical catalysts the taste of food the potency of drugs and the sintering shrink age of metallurgical powders are also strongly affected by the size of the particles of which the powder is made up Particle size measurement is to powder technology as thermometry is to the study of heat and is in the same state of flux as thermometry was in its early days Only in the case of a sphere can the size of a particle be completely described by one number

Powder Sampling and Particle Size Determination T. Allen, 2003-12-09 Powder technology is a rapidly expanding technology and nowhere more than in particle characterization There has been an explosion of new particle measuring techniques in the past ten year particularly in the field of on line measurement One of the main aims of this book is to bring the reader up to date with current practices One important area of interest is the

improvements in on line light scattering instruments and the introduction of ultrasonic on line devices Another is the introduction of on line microscopy which permits shape analysis in conjunction with particle sizing Schools of powder technology are common in Europe and Japan but the importance of this subject has only recently been recognised in America with the emergence of the Particle Research Centre PERC at the University of Florida in Gainesville Details all the latest developments in powder technology Written by established authority on powder technology A comprehensive text covering all aspects of powder technology and handling of particulate solids including characterization handling and applications
