Many textbooks address supply chain planning problems and present mathematical tools and methods for solving certain classes of problems. This book is intended to complement these texts by focusing not on the mathematical models but on the problems that arise in practice that either these models do not adequately address or that make applying the models difficult or impossible. The book is not intended to provide pat solutions to these problems but more to highlight the complexities and subtleties involved and describe ways to overcome practical issues that have worked for some companies. **Dynamic**

Change Management Martin Kupiek, Bettina Marcinkowski, 2024-11-01. This book offers a new perspective on change projects in organizations. While traditional approaches of analysis, planning, and implementation can be too slow and unsatisfactory in dynamic environments, this book introduces a context-oriented dynamic approach that seamlessly integrates technology, processes, and people into the organizational framework. Drawing from organizational theory, it prioritizes both the formal and informal aspects of an organization's structure and culture and emphasizes the emotional side of change. It provides practical guidance on using emotion concepts to facilitate change in a positive way and covers key supporting technologies, communication strategies, and human resource considerations. In addition to describing the approach, the book provides helpful tips on selecting the right consultants and embedding change know-how for future initiatives. It is an indispensable resource for anyone leading a change project or looking to improve their organization's ability to adapt. So why settle for a traditional approach when you can achieve meaningful change through a dynamic, context-oriented approach?
