*Fuzzy Logic, Identification and Predictive Control* Jairo Jose Espinosa Oviedo, Joos P.L. Vandewalle, Vincent Wertz, 2007-01-04 Modern industrial processes and systems require adaptable advanced control protocols able to deal with circumstances demanding judgement rather than simple yes no on off responses circumstances where a linguistic description is often more relevant than a cut and dried numerical one The ability of fuzzy systems to handle numeric and linguistic information within a single framework renders them efficacious for this purpose Fuzzy Logic Identification and Predictive Control first shows you how to construct static and dynamic fuzzy models using the numerical data from a variety of real industrial systems and simulations The second part exploits such models to design control systems employing techniques like data mining This monograph presents a combination of fuzzy control theory and industrial serviceability that will make a telling contribution to your research whether in the academic or industrial sphere and also serves as a fine roundup of the fuzzy control area for the graduate student

**Optimal Design and Control of Systems with One-direction Clutches for Function Generation** Chin-Tzung Michael Chang, 1996 *Analysis and Control of Ultrafast Photoinduced Reactions* Oliver Kühn, Ludger Wöste, 2007-07-05 This book summarizes several years of research carried out by a collaboration of many groups on ultrafast photochemical reactions It emphasizes the analysis and characterization of the nuclear dynamics within molecular systems in various environments induced by optical excitations and the study of the resulting molecular dynamics by further interaction with an optical field

**3D Geo-Information Sciences** Jiyeong Lee, Siyka Zlatanova, 2008-10-24 In recent years 3D geo information has become an important research area due to the increased complexity of tasks in many geo scientific applications such as sustainable urban planning and development civil engineering risk and disaster management and environmental monitoring Moreover a paradigm of cross application merging and integrating of 3D data is observed The problems and challenges facing today s 3D software generally application oriented focus almost exclusively on 3D data transportability issues the ability to use data originally developed in one modelling visualisation system in other and vice versa Tools for elaborated 3D analysis simulation and prediction are either missing or when available dedicated to specific tasks In order to respond to this increased demand a new type of system has to be developed A fully developed 3D geo information system should be able to manage 3D geometry and topology to integrate 3D geometry and thematic information to analyze both spatial and topological relationships and to present the data in a suitable form In addition to the simple geometry types like point line and polygon a large variety of parametric representations freeform curves and surfaces or sweep shapes have to be supported Approaches for seamless conversion between 3D raster and 3D vector representations should be available they should allow analysis of a representation most suitable for a specific application
