Email Hoaxes Theresa Heyd, 2008-04-02 How genres emerge and evolve on the Internet has become one of the central questions in studies of computer mediated communication CMC This book addresses the issue of genrefication by giving an in depth analysis of email hoaxes as a candidate for digital genre status Email hoaxes are deceptive messages that spread in digital social networks they are a fascinating object for discourse linguistics as they exemplify a major pragmatic tendency in CMC namely deceptivity and a lowering of sincerity standards This study examines formal and functional aspects of email hoaxes and provides ample evidence both from a systematized corpus and in situ data collected online Besides a structural and microlinguistic analysis it identifies key issues such as pragmatic duality narrativity and textual variation and change in email hoaxes In conclusion a digital genre model is outlined that bridges both the old new and the formal functional gaps and may be applied to many other digital genre ecologies

the online landscape of contemporary folklore is crucial for grasping the formation and circulation of belief in the digital age Ultimately Peck argues that advancing our comprehension of legends online can help us better understand how similar belief genres like fake news conspiracy theories hoaxes rumors meme culture and anti expert movements are enabled by digital media
