This book explores how science learning can be more relevant and interesting for students and teachers by using a contextualized approach to science education. The contributors explore the contextualization of science education from multiple angles such as teacher education, curriculum design, assessment and educational policy, and from multiple national perspectives. The aim of this exploration is to provide and inspire new practical approaches to bring science education closer to the lives of students to accelerate progress towards global scientific literacy. The book presents real life examples of how to make science relevant for children and adolescents of diverse ethnic and language backgrounds, socioeconomic status and nationalities, providing tools and guidance for teacher educators and researchers to improve the contextualization and cultural relevance of their practice. The book includes rigorous studies demonstrating that the contextualization of science learning environments is essential for student engagement in learning science and practitioners' reflections on how to apply this knowledge in the classroom and at national scale. This approach makes this book valuable for researchers and professors of science education and international education interested in designing teacher education courses that prepare future teachers to contextualize their teaching and in adding a critical dimension to their research agendas.

[Applying Machine Learning in Science Education Research](#) Peter Wulff, Marcus Kubsch, Christina Krist, 2025-02-28. This open access textbook offers science education researchers a hands on guide for learning critically examining and integrating machine learning ML methods into their science education research projects. These methods power many artificial intelligence AI based technologies and are widely adopted in science education research. ML can expand the methodological toolkit of science education researchers and provide novel opportunities to gain insights on science related learning and teaching processes; however, applying ML poses novel challenges and is not suitable for every research context. The volume first introduces the theoretical underpinnings of ML methods and their connections to methodological commitments in science education research. It then presents exemplar case studies of ML uses in both formal and informal science education settings. These case studies include open source data, executable programming code and explanations of the methodological criteria and commitments guiding ML use in each case. The textbook concludes with a discussion of opportunities and potential future directions for ML in science education. This textbook is a valuable resource for science education lecturers, researchers, undergraduate, graduate and postgraduate students seeking new ways to apply ML in their work.
