Romberg, 1999-04-01 Mathematics Classrooms That Promote Understanding synthesizes the implications of research done by the National Center for Research in Mathematical Sciences on integrating two somewhat diverse bodies of scholarly inquiry the study of teaching and the study of learning mathematics This research was organized around content domains and or continuing issues of education such as equity and assessment of learning and was guided by two common goals defining the mathematics content of the K 12 curriculum in light of the changing mathematical needs of citizens for the 21st century and identifying common components of classrooms that enable students to learn the redefined mathematics with understanding To accomplish these goals classrooms in which instruction facilitated the growth of understanding were established and or studied This volume reports and discusses the findings which grew out of this research and subsequent papers and discussions among the scholars engaged in the endeavor Section I Setting the Stage focuses on three major threads What mathematics should be taught how we should define and increase students understanding of that mathematics and how learning with understanding can be facilitated for all students Section II Classrooms That Promote Understanding includes

vignettes from diverse classrooms that illustrate classroom discourse student work and student engagement in the mathematics described in Chapter 1 as well as the mental activities described in Chapter 2 These chapters also illustrate how teachers deal with the equity concerns described in Chapter 3 Section III addresses Developing Classrooms That Promote Understanding The knowledge of the teaching learning process gained from the research reported in this volume is a necessary prerequisite for implementing the revisions called for in the current reform movement The classrooms described show that innovative reform in teaching and learning mathematics is possible Unlike many volumes reporting research this book is written at a level appropriate for master s degree students Very few references are included in the chapters themselves instead each chapter includes a short annotated list of articles for expanded reading which provides the scholarly basis and research substantiation for this volume

Decision Making for Successful Planning CJ Rhoads, William Roth, 2021-12-30 Turbulence is not new to the business world In fact turbulence is increasing and managers are seeing teams spinning their wheels Management systems are in a state of crisis and operations are more complex The old top down operations mode no longer suffices Today's businesses demand speed and increased accuracy forcing everyone to re evaluate chains of command and tear down the walls between functions Amid the responsibilities of traditional management lies problem solving The push is toward moving decision making authority down the ladder to all levels Managers are no longer equipped to or capable of making the number and variety of necessary decisions in a vacuum The current mode is to have employees deal directly with workplace issues and take corrective action without complaint and without management involvement Coping with this reality and preparation for these improvements in workplace problem solving requires interest and motivation Strategic Decision Making for Successful Planning can facilitate this by demystifying and simplifying the process The book bridges philosophy and theory and puts together a practical integration of all the tools necessary to get results from your investment of time energy and money What is unique about this book is while it's based on a strong academic foundation it does not get bogged down in the human planning or psychological process of solving problems It doesn't provide pie in the sky creative solutions or a five year process for solving problems and planning for the future Numerous techniques and tools are included to make the book the right balance between practical and academic The book also includes an extensive case study to illustrate points made in the text
