Partition and Peace in Civil Wars Carter R. Johnson, 2021-08-09 This book examines whether partition is an effective means to resolve ethnic and sectarian civil wars It argues that partition is unlikely to end ongoing ethnosectarian civil wars but it can increase the likelihood of preventing civil war recurrence as long as the partition separates civilians and militaries The book presents in depth case studies of Georgia Abkhazia and Moldova Transnistria in addition to cross national comparisons of all ethnosectarian civil wars between 1945 and 2004 This analysis demonstrates when partitioning a country can help transform an identity based civil war into a lasting peace Highlighting practical and moral challenges of separating ethnosectarian groups the book contends that complete partitions cannot be easily implemented by the international community and this limits their applicability It also demonstrates that ethnosectarian civil wars are driven less by inter group antagonisms and more by state breakdown meaning displaced minorities can reintegrate peacefully after partition as long as a minimal level of state building has been completed The book ends by examining whether partition would be useful for five contemporary conflicts Iraq Ukraine Donbass Afghanistan Sudan South Sudan and Serbia Kosovo This book will be of much interest to students of civil wars ethnic conflict peace and conflict studies and international relations

Advanced Oxidation Technologies Marta I. Litter, Roberto J. Candal, J. Martin Meichtry, 2014-03-03 Advanced Oxidation Technologies AOTs or Processes AOPs are relatively new and innovative technologies to remove harmful and toxic pollutants

The most important processes among them are those using light such as UVC H₂O₂ photo Fenton and heterogeneous photocatalysis with TiO₂. These technologies are also relatively low cost and therefore useful for countries under development where the economical resources are scarcer than in developed countries. This book provides a state of the art overview on environmental applications of Advanced Oxidation Technologies (AOTs) as sustainable low cost and low energy consuming treatments for water, air, and soil. It includes information on innovative research and development on TiO₂ photocatalytic redox processes, Fenton, Photo Fenton processes, zerovalent iron technology, and others, highlighting possible applications of AOTs in both developing and industrialized countries around the world in the framework of a crosscutting and comprehensive look at environmental problems. The book is aimed at professionals and academics worldwide working in the areas of water resources, water supply, environmental protection, and will be a useful information source for decision and policy makers and other stakeholders working on solutions for environmental problems. **Nuclear Science Abstracts**
