possible the negative effects on the user's safety and wellbeing that can arise from an improper design and management of collaborative applications as well as optimizing production system performances

Foundations of Artificial Intelligence and Robotics Wendell H. Chun, 2024-12-24 Artificial intelligence AI is a complicated science that combines philosophy cognitive psychology neuroscience mathematics and logic logicism economics computer science computability and software Meanwhile robotics is an engineering field that compliments AI There can be situations where AI can function without a robot e.g. Turing Test and robotics without AI e.g. teleoperation but in many cases each technology requires each other to exhibit a complete system having smart robots and AI being able to control its interactions i.e. effectors with its environment This book provides a complete history of computing AI and robotics from its early development to state of the art technology providing a roadmap of these complicated and constantly evolving subjects Divided into two volumes covering the progress of symbolic logic and the explosion in learning deep learning in natural language and perception this first volume investigates the coming together of AI the mind and robotics the body and discusses the state of AI today Key Features Provides a complete overview of the topic of AI starting with philosophy psychology neuroscience and logicism and extending to the action of the robots and AI needed for a futuristic society Provides a holistic view of AI and touches on all the misconceptions and tangents to the technologies through taking a systematic approach Provides a glossary of terms list of notable people and extensive references Provides the interconnections and history of the progress of technology for over 100 years as both the hardware Moore's Law GPUs and software i.e. generative AI have advanced Intended as a complete reference this book is useful to undergraduate and postgraduate students of computing as well as the general reader It can also be used as a textbook by course convenors If you only had one book on AI and robotics this set would be the first reference to acquire and learn about the theory and practice

fundamental equations and illustrations many in color **AI vs Humans** Michael W. Eysenck, Christine Eysenck, 2021-12-30 The great majority of books on artificial intelligence are written by AI experts who understandably focus on its achievements and potential transformative effects on society In contrast AI vs Humans is written by two psychologists Michael and Christine Eysenck whose perspective on AI including robotics is based on their knowledge and understanding of human cognition This book evaluates the strengths and limitations of people and AI The authors expertise equips them well to consider this by seeing how well or badly AI compares to human intelligence They accept that AI matches or exceeds human ability in many spheres such as mathematical calculations complex games e g chess Go and poker diagnosis from medical images and robotic surgery However the human tendency to anthropomorphise has led many people to claim mistakenly that AI systems can think infer reason and understand while engaging in information processing In fact such systems lack all those cognitive skills and are also deficient in the quintessentially human abilities of flexibility of thinking and general intelligence At a time when human commitment to AI appears unstoppable this up to date book advocates a symbiotic and cooperative relationship between humans and AI It will be essential reading for anyone interested in AI and human cognition

Digital Stimulation Mimi Marinucci, 2024-09-05 Digital Stimulation explores the subject of intimacy including romantic and sexual intimacy between human and nonhuman entities particularly technological entities As relationships between humans and machines become increasingly prevalent it is important to address the potential for such relationships to reflect to reinforce or to reinvent existing hierarchies The distinction between man and machine like the distinction between man and beast between man and brute between man and nature between man and woman and so on is an expression of the anthropocentrism and androcentrism permeating western ideas of self and other Concerns about the representation or misrepresentation and treatment or mistreatment of machines are of consequence for other human and nonhuman others as well and this book details many of the ways in which depictions of machines especially robots mirror ideas and attitudes about various human and nonhuman others This book also addresses the ongoing development of machines designed explicitly for intimate engagement with humans such as sex robots As they become more and more lifelike it becomes progressively more urgent to cultivate compassion toward such machines **Trust in Human-Robot Interaction** Chang S.
