his Synergism Hypothesis a theory of complexity in evolution that assigns a key causal role to various forms of functional synergy Corning puts this theory into a much broader framework in Holistic Darwinism addressing many of the issues and concepts associated with the evolution of complex systems Corning's paradigm embraces and integrates many related theoretical developments of recent years from multilevel selection theory to niche construction theory gene culture coevolution theory and theories of self organization Offering new approaches to thermodynamics information theory and economic analysis Corning suggests how all of these domains can be brought firmly within what he characterizes as a post neo Darwinian evolutionary synthesis
