Insert the shells as individual units into the grooves, using the following bearing carrier balls (check with the bearing carrier balls) until the balls are seated.

Tighten the flange bolts to the specified torques; the rear center and front shafts must be tightened to 40-45 ft.-lb. If the front wheel bearing has been disassembled, tighten it through the Shimano tooling stand to a torque reading of 80-90 ft.-lb., while the rear shaft is held in the correct position.

When using new brackets close to the center bearing mounting, ensure that they are of the correct thickness, as 1/2" brackets on 1/2" spars are thicker than those fixed to 1/2" spars and these would not be interchangeable.
