Answers to Chapter Questions

Chapter 1

Review questions

- 1 Both non-living and living things are composed of matter. Matter is made up of atoms.
- 2 Living things are capable of reproduction, growth and movement.
- 3 6 electrons
- 4 The proton defines the element.
- 5 The atomic number would be 15 and the mass number would be 32. The symbol for phosphorus is P. The standard notation is $^{32}_{15}\text{P}$.
- 6 The number of neutrons may vary in all the isotopes of a particular element. Hence, an element may have different mass numbers.
- 7 The four major elements found in living things are oxygen, carbon, hydrogen and nitrogen.
- 8 Radioactive isotopes are used as a source of radiation in therapy and as tracers to tag particular compounds.
- 9 A compound is a pure substance made up of more than one type of atom held together by chemical bonds.
- 10 Ionic compounds are composed of cations and anions, which form ionic bonds. Molecular compounds result from atoms sharing their electrons to form covalent bonds. Molecular compounds vary in their solubility in water depending upon their polar nature. Ionic compounds are generally more soluble in water than molecular compounds.
- 11 Molecular compounds result from the sharing of electrons between non-metal elements, whereas ionic compounds are composed of ions and result from the transfer of electrons between metallic and non-metallic elements. As a result of the charges carried, ionic compounds tend to be more readily dissolved in water compared to molecular compounds.
- 12 A chemical bond is the force of attraction holding atoms together in chemical molecules.
- 13 Molecules that have permanent regions of opposite charge are termed 'polar'. Non-polar molecules have no permanent regions of opposite charge.
- 14 Water molecules are highly polar and attract one another, forming hydrogen bonds. Hydrogen bonding determines many of the unique properties of water.
- 15 Hydrophilic molecules, such as alcohol, have regions of opposite charge that readily form hydrogen bonds with water molecules and hence dissolve.

Germinal Centers in Immune Responses Hans Cottier, N. Odartchenko, R. Schindler, C.C. Gongdon, 2012-12-06 In the last few years the study of germinal centers of the lymphoid tissue has progressed at an accelerated pace Questions about their role and their significance in immune responses that could not be answered mainly because of technical limitations are presently approached experimentally from many different directions Hypotheses some more than half a century old receive renewed attention At this time members of the Biology Division Oak Ridge National Laboratory U S A and of the Institute of Pathology University of Bern Switzerland decided to bring together workers interested in the field The Conference was held in Bern June 22 24 1966 and included fifty seven contributions which were discussed at length The range of interest extended from phylogenesis and anatomy to studies on cell proliferation immunohistochemistry cancer research and radiobiology The aim of this broad coverage was to combine all available information on the role of germinal centers in immune responses in a single package instead of leaving it scattered around in reports dealing with divergent immunological problems This attempt is reflected in the present book A rather large space has been devoted to the lively discussions which followed the reports the volume of most of which had been voluntarily limited The discussions are not reported verbatim but care has been taken to insure neutrality and objectivity in the necessary adaptation of the shortened transcription We have been very fortunate indeed to have Drs

Psychotherapy Process M. Mahoney, 2012-12-06

Whatever else it may be psychotherapy offers a clear form of human compassion channeled through myriad assumptions about the causes and solutions of human distress There has of course been a longstanding debate about whether the psychotherapist is best described and trained as an artisan or a scientist Volumes of scholarly argument have also addressed such themes as the essential ingredients of psychotherapy the role of technique the importance of client characteristics and

the significance of the therapist's personality. Experts have defended a wide range of opinions on these issues and have mustered evidence to support their individual claims. The purpose of the present volume is neither to defend nor to expand any specific claim about psychotherapy. Rather, it is intended to be a heuristic compendium of contemporary views on this humane endeavor. At the most basic level of analysis, the field of psychotherapy research now faces three fundamental questions: 1. Is psychotherapy effective? 2. When and why is it effective? 3. How should psychotherapists be trained? The latter two questions obviously presume that the first can be answered affirmatively. Although I would hardly defend the generalization that all forms of psychotherapy are effective for all clients, it is equally clear that there is now ample warrant for the contention that some of the things we do in our fifty-minute hours seem to have positive effects.

Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1954, **40 Inquiry Exercises for the College Biology Lab**. A. Daniel Johnson, 2009. Drawing from the author's own work as a lab developer, coordinator, and instructor, this one-of-a-kind text for college biology teachers uses the inquiry method in presenting 40 different lab exercises that make complicated biology subjects accessible to major and nonmajors alike. The volume offers a review of various aspects of inquiry, including teaching techniques, and covers 16 biology topics, including DNA isolation and analysis, properties of enzymes, and metabolism and oxygen consumption. Student and teacher pages are provided for each of the 16 topics.

Physical Biology of the Cell. Rob Phillips, Jane Kondev, Julie Theriot, Hernan Garcia, 2012-10-29. *Physical Biology of the Cell* is a textbook for a first course in physical biology or biophysics for undergraduate or graduate students. It maps the huge and complex landscape of cell and molecular biology from the distinct perspective of physical biology. As a key organizing principle, the proximity of topics is based on the physical concepts that

Voyage 4 - Teacher's Book. Paul Rogers, Amanda Rainger, 2002. Presenting contemporary French course with grammar and progression, this title helps teachers to cover the requirements of the Revised National Curriculum. This Teacher's Book provides teachers with support in planning and delivering their lessons. It contains answers to exercises from the Students Book and the Copymasters.

Nelson Modular Science. Paul Collison, Peter Ellis, 2003. The Nelson Modular Science series is made up of three books divided into single, double, and triple award modules presented in an accessible format. Book 1 covers the six single award and one coursework modules. Book 2 contains six double award modules, and Book 3 covers the six triple award modules. Each module is covered in self-contained units. This teacher's file includes practical support sheets and addresses Sc1 investigations. Worksheets are provided to integrate the use of ICT throughout science. Additional GCSE style questions and modular tests should enhance learning and recall of information.
