

CHAPTER 6:

Sinusoidal Functions

NOTE: Answers are given to the same number of decimal points as the numbers in each question.

Getting Started, p. 344

1. a) x represents the number of times the price is reduced by \$2. The factor $(30 - 2x)$ represents the price of one T-shirt in terms of the number of times the price is reduced; the factor $(100 + 20x)$ represents the total number of T-shirts sold in terms of the number of times the price is reduced.

b) Since the revenue generated by T-shirt sales can be modelled by the function

$R(x) = (30 - 2x)(100 + 20x)$, for $R(x)$ to be equal to 0, one or both of the factors must be equal to 0. $100 + 20x$ can only be equal to 0 if x is negative, and this is not possible. Therefore, $30 - 2x = 0$.

$$-2x = -30$$

$$x = 15 \text{ times}$$

c) Create a table with two columns. In the first column put the number of price reductions. In the second column, put the corresponding revenue. Continue until the revenue starts to decrease.

Number of Price Reductions	Revenue (dollars) $R(x) = (30 - 2x)(100 + 20x)$
0	3000
1	3360
2	3640
3	3840
4	3960
5	4000
6	3960

The price will have to be dropped 5 times to reach the maximum revenue.

d) From the table created in part c, it's apparent that the maximum revenue is \$4000.

e) The price of a T-shirt is equal to $30 - 2x$, so to obtain the maximum revenue, the T-shirts will sell for $30 - 2(5)$ or 20 dollars.

f) The number of T-shirts sold is equal to $100 + 20x$, so to obtain the maximum revenue, $100 + 20(5)$ or 200 T-shirts will be sold.

2. a)

The puck travelled 180 cm to the opposite end of the table in the first 0.25 s and 180 cm back in the next 0.25 s for a total distance of 360 cm.

b) The puck was farthest away from where it was shot when it was 180 cm away, and this occurred after 0.25 s.

c) The puck travelled 180 cm in the first 0.25 s.

$$\frac{180 \text{ cm}}{0.25 \text{ s}} = \frac{720 \text{ cm}}{1 \text{ s}} = 720 \text{ cm/s}$$

d) The domain is all possible values of the time, or t , while the range is all possible values of the distance, or d . Therefore, the domain is $\{t \in \mathbb{R} \mid 0 \leq t \leq 0.5\}$, and the range is $\{d \in \mathbb{R} \mid 0 \leq d \leq 180\}$.

3. a)

Within the larger triangle there exist two smaller right triangles. The smaller right triangle with a hypotenuse of 15 cm has the measurements of two angles given: 40° and 90° . Therefore, the measurement of the unknown angle within that triangle is 50° . With that angle

J. Tipler,2014-11 New National Framework Mathematics features extensive teacher support materials which include dedicated resources to support each Core and Plus Book The 9 Core Teacher Planning Pack contains Teacher Notes for every chapter with a Self contained lesson plan for each of the units in the pupil books *Emotion Regulation* Pamela M. Cole,Tom Hollenstein,2018-06-12 One of the most important advances in the study of emotion regulation is understanding it as a dynamic process that develops across the life span Emotion Regulation focuses on current conceptual and methodological issues in terms of change over various time scales developmental change across years as well as changes from day to day from situation to situation and from moment to moment Written by top experts in the field the volume is organized around three age periods of the life span infancy and childhood adolescence and adulthood By taking the matter of time seriously these chapters represent promising and necessary approaches to broadening our knowledge of emotion regulation as a dynamic process that changes with age The volume provides guidance for future research that will enable researchers to leave behind facile and static conceptualizations of emotion regulation in favor of richer and more explanatory frameworks Differential Equations Nelson Bush

Conkwright,1944 **Almost Periodic and Almost Automorphic Solutions to Integro-Differential Equations** Marko Kostić,2019-05-06 This book discusses almost periodic and almost automorphic solutions to abstract integro differential Volterra equations that are degenerate in time and in particular equations whose solutions are governed by degenerate solution operator families with removable singularities at zero It particularly covers abstract fractional equations and inclusions with multivalued linear operators as well as abstract fractional semilinear Cauchy problems Basic Mathematics for Electronics Nelson Magor Cooke,1992 Basic Mathematics for Electronics combines electronic theory and applications with the mathematical principles necessary to solve a wide range of circuit problems Coverage of mathematical topics reflects current trends in electronics A complete chapter is devoted to Karnaugh mapping to help students cope with the greater complexity of modern digital circuit devices Marginal notes indicate areas of special interest in computers and computer usage To facilitate learning material is presented in a block form that employs a two color single column format After the initial chapters sections may be studied independently As each new topic is introduced illustrative examples and numerous problems graded from easy to difficult are given for reinforcement Answers to odd numbered problems are provided in the back of the book The Answers to Even Numbered Problems booklet contains answers and selected worked out solutions A computerized Test Bank and Transparency Masters are also available with this edition **Theoretical Approaches to Non-Numerical Problem Solving** R. B. Banerji,M. D. Mesarovic,2012-12-06 Advances in computer technology have pointed out the next important area of computer applications solution of non numerical problems It is hardly necessary to emphasize the importance of these kind of problems First of all most of the decisions one has to make in real life situations are non numerical in the first instance and can be represented as numerical problems only as approximations which are often only partially valid Second to use the computer to its full potential it should be employed as a logical machine capable of deduction and not just as a numerical calculating machine Thus the computer would extend man s capability for logical reasoning and not just for his capability to do fast and accurate calculation It is not a new area indeed non numerical problems are central in fields such as artificial intelligence heuristic programming pattern recognition classification and information processing and retrieval etc However it is fair to assess that progress in the area has not been quite as expected One of the reasons was a lack of conceptual and theoretical framework in which to investigate different classes of non numerical problems to improve understanding of various types of problems and methods for their solutions and furthermore to enable the methods which have been proven as effective in one situation to be used in another situation with appropriately similar structure Accelerated Testing Wayne B.
