Hammert, 2013-08-28 The peripheral nerves of the hand are absolutely essential to the basic senses of that area and motor function Conditions that can occur to the peripheral nerves of the hand include neuromas nerve death compression and blunt traumatic injury This issue will cover all of these topics along with papers on general anatomy healing techniques and rehabilitation Restoring Functional Behaviors After Traumatic Peripheral Nerve Injuries George Davis Bittner, Jared Bushman, Jaimie Shores, Joseph Alderete, Dale Sengelaub, 2024-02-20

Peripheral nerve injuries PNIs by trauma are the most common neuronal injury in civilian and military populations and significantly burden health care systems Mammals including humans with PNIs experience 1 immediate loss of sensory and motor functions mediated by the denervated target tissues 2 rapid 3 7d Wallerian Degeneration WD of severed distal axonal segments and 3 slow 1mm day regeneration by naturally occurring axonal outgrowths from surviving severed proximal stumps that produce poor if any functional recovery because of slow axonal regeneration for long distances and lack of axonal guidance Denervated muscle fibers and sensory organs often atrophy before any re innervation can occur
