Age-Associated Arterial Diseases Mingyi Wang,Jiguang Wang,Gianfranco Pintus,Cuntai Zhang,2019-01-24 The underlying mechanisms behind aging has long been a great scientific mystery that the biomedical research community has long studied In developed nations as the population grows older increases in life expectancy is increasingly limited by our relatively poor control of chronic aging associated diseases such as arterial aging Among age related conditions that negatively influence longevity Growing evidence demonstrates that arterial aging is fundamentally caused by a proinflammatory process that begins at birth and results in detrimental effects that affects every organ system Vascular aging is the leading risk factor for quintessential cardiovascular diseases such as hypertension and atherosclerosis With aging vascular walls develop a pro inflammatory and stressed microenvironment characterized by both an upregulation of pro inflammatory chemokines and

cytokines as well as a down regulation anti inflammatory counterparts This chronic imbalance in inflammatory regulatory networks is the key driver of changes at the cellular and molecular level that result in hypertensive and atherosclerotic arterial Thus an intervention of proinflammation may be a viable therapeutic intervention to reduce morbidity and mortality from cardiovascular diseases In this eBook we aim to supply an updated overview of the physiological and biochemical mechanisms that affect inflammation and vascular aging We believe that this eBook will contribute to the understanding of the pathogenesis of many chronic or age related diseases as well as to their treatment with both current and new therapeutic approaches

why is it important What are the main drivers of sustainable product development They explain how design can help to control human impact on the environment by not only minimising pollution waste energy use and use of scarce resources but also by thinking outside the box to create systems and services that can reduce the number of products manufactured The aim is to put sustainable development within a commercial context and introduce a new focus for design Design for Sustainability outlines and assesses the methods tools and techniques available to designers both for design innovation and design improvement A wide range of case studies are presented across a number of product sectors including electrical goods IT and furniture Initially they demonstrate product improvement and redesign examples include those that reduce waste pollution and energy consumption designing for recycling and reuse of parts Further examples are then provided exemplifying the more radical approach of system and service design The final section takes the reader through a whole sustainable design project from start to finish from brief to manufacture References and sources of information are also included
