Royo-Grasa, 2025-09-30 *Transmodern Literatures in the 21st Century Of f Limits* offers an in depth examination of how transmodern literatures in English over the last two decades have addressed the phenomenon of the limit The 14 chapters that make up the volume examine how geographical racial ethnical sociocultural generical ontological epistemological and other limits are articulated transgressed and reconfigured in recent narratives by authors writing in a wide variety of transmodern trends such as Afro and Africanfuturism Young Adult feminist science fiction food fiction air travel fiction the networked novel and future narratives amongst others They thereby expose and challenge hierarchised binary dichotomies as Euro and Anthropocentric exclusionary discursive constructs that have kept non hegemonic voices off limits To counter the detrimental effects of the neoliberal grand narrative of globalisation the chapters as well as the narratives of the limit they analyse emphasise an urgent need for inclusiveness relationality and communality

**Formal Ontology in Information Systems** Achille C. Varzi, Laure Vieu, 2004 Just as ontology developed over the centuries as part of philosophy so in recent years ontology has become intertwined with the development of the information sciences Researchers in such areas as artificial intelligence formal and computational linguistics biomedical informatics conceptual modeling knowledge engineering and information retrieval have come to realize that a solid foundation for their research calls for serious work in ontology understood as a general theory of the types of entities and relations that make up their respective domains of inquiry In all these areas attention has started to focus on the content of information rather than on just the formats and languages in terms of which information is represented A clear example of this development is provided by the many initiatives growing up around the project of the Semantic Web And as the need for integrating research in these different fields arises so does the realization that strong principles for building well founded ontologies might provide significant advantages over ad hoc case based solutions The tools of Formal Ontology address precisely these needs but a real effort is required in order to apply such philosophical tools to the domain of Information Systems Reciprocally research in the information science raises specific ontological questions which call for further philosophical investigations
