What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015 Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it Despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent And paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades This disconnect has both climate scientists and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument But the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher's description [Advanced Computer and Communication Engineering Technology](#) Hamzah Asyrani Sulaiman, Mohd Azlishah Othman, Mohd Fairuz Iskandar Othman, Yahaya Abd Rahim, Naim Che Pee, 2015-12-28 This book covers diverse aspects of advanced computer and communication engineering focusing specifically on industrial and manufacturing theory and applications of electronics communications computing and information technology Experts in research industry and academia present the latest developments in technology describe applications involving cutting edge communication and computer systems and explore likely future trends In addition a wealth of new algorithms that assist in solving computer and communication engineering problems are presented The book is based on presentations given at ICOCOE 2015 the 2nd International Conference on Communication and Computer Engineering It will appeal to a wide range of professionals in the field including telecommunication engineers computer engineers and scientists researchers academics and students

Regional Risk and Security in Japan Glenn D. Hook, Ra Mason, Paul O'Shea, 2015-05-20 Japan's unusual position in the realm of international politics encapsulates a three fold juxtaposition both in and out of Asia both occupied by and a close ally of the United States and both a key trade partner and a strategic rival of China Whilst international relations theory offers a number of ways to analyse these relations this book instead utilizes the concept of risk to provide an innovative perspective on Japan's relations with China North Korea and the US The book elucidates how risk potential harm and harm are faced disproportionately by certain groups in society This is demonstrated by providing an empirically rich analysis of the domestic implications of security relations with China North Korea and the United States through the presence of US troops in Okinawa Beginning with a theoretical discussion of risk it goes on to demonstrate how the concept of risk adds value to the study of international

relations in three senses First the concept helps to break down the boundaries between the international and domestic Second the focus on risk and the everyday directs us to ask basic questions about the costs and benefits of a security policy meant to secure the national population Third what implications do these two points have for governance The question is one of governance as Japan s externally oriented security policy produces domestic insecurity shared disproportionately not equally as this volume makes clear Developing the theory of risk as a tool for understanding international relations this book will be of great interest to students and scholars of Asian politics Japanese politics international relations and security studies as well as to policy makers and practitioners working in the field Climate Politics and the Impact of Think Tanks

Alexander Ruser,2018-05-08 This book provides an innovative theoretical and analytical framework for studying the role and impact of specialized research organizations and consultancies on decision making in climate politics It includes advanced empirical analysis of the case of Germany compared with the situation in the USA The book improves the understanding of the role and impact of scientific advice in coping with the challenge of anthropogenic climate change The Troubled Rhetoric and Communication of Climate Change Philip Eubanks,2015-05-15 Despite an overwhelming scientific consensus climate change remains one of the most controversial issues of our time Focusing on the rhetoric that surrounds the issue of climate change this groundbreaking book analyses why the debate continues to rage and examines how we should argue when winning the argument really matters Going beyond routine condemnations of the wildest statements made by religious fundamentalists or spokespeople for fossil fuel interests the book explains the mutually exacerbating problems that permit many of us greet catastrophic predictions with an equivocal shrug It argues that the argumentative situation around climate change makes a certain kind of skepticism fair minded skepticism not only possible but likely The book also strikes a hopeful note reminding us that people do change their minds in response to effective argumentation that appeals to deeply shared values Offering new insight into an ongoing academic discussion about the nature of argument and how it can be undertaken more effectively and ethically as well as a new perspective on the rhetoric of science and technology this book will be a valuable resource to students and scholars of climate change environmental humanities rhetoric environmental communication sociology and science and technology studies **Advanced Techniques in Musculoskeletal Medicine & Physiotherapy**

Drawing on the perspectives of geo politics and international law, this Handbook offers fresh insights and perspectives on the most pressing issues grouped under the headings of political ascendancy, climate and environmental issues, resources and energy and the response and policies of affected countries.

Good to Go: What the Athlete in All of Us Can Learn from the Strange Science of Recovery Christie Aschwanden, 2019-02-05. A New York Times Sports and Fitness Bestseller. The definitive tour through a bewildering jungle of claims that compose a multibillion dollar recovery industry. David Epstein, best selling author of *The Sports Gene*. Acclaimed science journalist Christie Aschwanden takes readers on an entertaining and enlightening tour through the latest science on sports and fitness recovery. She investigates claims about sports drinks, chocolate milk and recovery beer, examines the latest recovery trends and even tests some for herself including cryotherapy, foam rolling and Tom Brady endorsed infrared pajamas. *Good to Go* seeks an answer to the question: Do any of these things actually help the body recover and achieve peak performance?

Soil Science in Italy Carmelo Dazzi, Anna Benedetti, Giuseppe Corti, Edoardo A. C. Costantini, 2024-05-03. History is generally defined as the study of past events, particularly in human affairs and is mostly understood when presented chronologically. That's why someone also defined it as the chronological record of the past. Knowing the past is extremely important for any society and human being. Past gives us insights into our evolving behavior in many matters of life. The book is seen as a unique opportunity to preserve the memory of the Italian history of soil science. It represents a milestone and a cultural heritage. Moreover, the book is a sort of ideal bridge between the pioneers of soil science in Italy and the young generation of researchers contributing to spreading awareness of the importance of soil as a fundamental resource.
