

QUESTION 12

- (a)
- The number of photoelectrons emitted per second is directly proportional to the intensity of radiation.
 - The energy of the emitted electrons depend on the frequency of the incident radiation.
 - There exists a threshold frequency for all surfaces, below which no electrons are emitted no matter the intensity of radiation.

(b) Given: Power of source = 6×10^{-3} Watts or Joules / s
 No of photons per second = 1×10^{16}

$$\text{Energy per photon} = \frac{\text{Power}}{\text{no of photons per second}}$$

$$= \frac{6 \times 10^{-3}}{1 \times 10^{16}}$$

$$E = hf = 6 \times 10^{-19} \text{ Joules}$$

Energy = $hf - W_0 = eV_0$ where W_0 is work function.
 $E - eV_0 = W_0$ where V_0 is stopping potential
 $6 \times 10^{-19} - (1.6 \times 10^{-19}) \times (2.2) = W_0$
 $6 \times 10^{-19} - 3.52 \times 10^{-19} = W_0$
 $W_0 = 2.48 \times 10^{-19} \text{ Joules}$
 $W_0 = \frac{2.48 \times 10^{-19}}{1.6 \times 10^{-19}} \text{ eV}$
 $W_0 = 1.55 \text{ eV}$

Problem Solving Ability and Achievement in Physics: Effect of Mastery Learning Strategy Dr. Manoj Praveen G. & Prof. (Dr.) K. Sivarajan, 2020-12-25 Education has been considered as the most important input and the most potent instrument for the development of an individual It is the key to national prosperity and welfare and that no investment is too great for it It is evident that education has a very important role to play in the economic and social development of the country in the building up of the truly democratic society in the promotion of national integration and unity and above all for the transformation of individual in the endless pursuit of excellence and perfection The students in a classroom have different socio economic status aptitudes interests attitudes etc and among them have different IQ levels In a classroom situation where the students are varied in learning levels i.e. average below average and above average most of the time teachers teach for the average neglecting the above average and below average in their hurry to finish the syllabus In the classroom the above average feel bored and the slow learners remain passive and day by day become poor in the subject

Old and New Questions in Physics, Cosmology, Philosophy, and Theoretical Biology Alwyn Van der Merwe, 2012-12-06 Simply to say that this is a collection of essays in honor of the late Wolfgang Yourgrau 1908 1979 is to explain at least for the obviously many insiders the unusually wide ranging title of the present volume In a Foreword to the Proceedings of the First International Colloquium focusing on logic physical reality and history held at the University of Denver in May of 1966 under their leadership Wolfgang Yourgrau and Allen Breck wrote in an oblique reference to C P Snow Indeed there are not two or three or four cultures there is only one culture our generation has lost its awareness of this Historians logicians physicists all are banded in one common enterprise namely in their desire to weave an enlightened fabric of human knowledge Augment if you will the foregoing categories of scholars with biologists philosophers cosmologists and theologians all of whom in addition to historians Wolfgang Yourgrau by dint of his inextinguishable enthusiasm and charismatic qualities assembled in Denver for the Second and Third International Colloquia in 1967 and 1974 respectively and a few other besides and one arrives at a statement of the credo which Yourgrau not only professed but consistently exemplified throughout his adult life

Probabilities in Physics Claus Beisbart, Stephan Hartmann, 2011-09-15 Many results of modern physics those of quantum mechanics for instance come in a probabilistic guise But what do probabilistic statements in physics mean Are probabilities matters of objective fact and part of the furniture of the world as objectivists think Or do they only express ignorance or belief as Bayesians suggest And how are probabilistic hypotheses justified and supported by empirical evidence Finally what does the probabilistic nature of physics imply for our understanding of the world This volume is the first to provide a philosophical appraisal of probabilities in all of physics Its main aim is to make sense of probabilistic statements as they occur in the various physical theories and models and to provide a plausible epistemology and metaphysics of probabilities The essays collected here consider statistical physics probabilistic modelling and quantum mechanics and critically assess the merits and disadvantages of objectivist and subjectivist views of probabilities in these fields In particular the Bayesian and Humean views of probabilities and the varieties of Boltzmann's typicality approach are examined The contributions on quantum mechanics discuss the special character of quantum correlations the justification of the famous Born Rule and the role of probabilities in a quantum field theoretic framework Finally the connections between probabilities and foundational issues in physics are explored The Reversibility Paradox the notion of entropy and the ontology of quantum mechanics are discussed Other essays consider Humean supervenience and the question whether the physical world is deterministic
