Arrival of the Fittest Andreas Wagner, 2014-10-02 Natural selection can preserve innovations but it cannot create them Nature's many innovations some uncannily perfect call for natural principles that accelerate life's ability to innovate Darwin's theory of natural selection explains how useful adaptations are preserved over time But the biggest mystery about evolution eluded him As genetics pioneer Hugo de Vries put it natural selection may explain the survival of the fittest but it cannot explain the arrival of the fittest Can random mutations over a mere 3.8 billion years really be responsible for wings eyeballs knees camouflage lactose digestion photosynthesis and the rest of nature's creative marvels And if the answer is no what is the mechanism that explains evolution's speed and efficiency In *Arrival of the Fittest* renowned evolutionary biologist Andreas Wagner draws on over fifteen years of research to present the missing piece in Darwin's theory Using experimental and computational technologies that were heretofore unimagined he has found that adaptations are not just driven by chance but by a set of laws that allow nature to discover new molecules and mechanisms in a fraction of the time that random variation would take Consider the Arctic cod a fish that lives and thrives within six degrees of the North Pole in waters that regularly fall below 0 degrees At that temperature the internal fluids of most organisms turn into ice crystals And yet the arctic cod survives by producing proteins that lower the freezing temperature of its body fluids much like antifreeze does for a car's engine coolant The invention of those proteins is an archetypal example of nature's enormous powers of creativity Meticulously researched carefully argued evocatively written and full of fascinating examples from the animal kingdom *Arrival of the Fittest* offers up the final puzzle piece in the mystery of life's rich diversity
