

Physical and Chemical Changes

Now that you know the difference between a physical and chemical property, this information can be used to determine whether a change in matter can be identified as a physical or chemical change. Just like the properties of matter, physical and chemical changes of matter have different characteristics which can usually be easily identified.

<u>Physical Changes</u>	<u>Chemical Changes</u>
• A change in size, shape, color, or a phase change (solid, liquid, gas) • No new substance is formed and the molecules do not change	• A change in the physical and chemical properties • A new substance is formed and the molecules of the substance are changed
<u>Examples of Physical Changes</u>	<u>Examples of Chemical Changes</u>
1. Melting a cube of sugar in coffee because it is still sugar 4. Water changed to an ice cube, boiling water, or a melting ice cube, molecules remain the same 5. Cutting apart an apple into smaller pieces making it easier to eat	1. Burning a cube of sugar with fire changes its molecules 4. Baking the ingredients of a cake changes many of the molecules due to the heat 5. An apple beginning to rot or being digested inside a person's stomach after it is eaten, will both change its molecules

Chemical and physical changes take place every day all around you. If you change the way something looks, but have not made a new substance, it is a **physical change**. If the substance has been changed into another substance it is a **chemical change**.

In a chemical change the atoms making up the molecules change. There is a **chemical reaction** that takes place during a chemical change. The reaction takes place usually due to another substance or heat added to it. One of the most commonly seen chemical reaction is rust forming on metal. If you leave your bike in the rain, it may begin to rust. Iron is exposed to oxygen gas in the air which results in rust. The iron is **oxidized** (oxygen added) and becomes iron oxide, which is the chemical name for rust.

There are many, many other examples of physical and chemical changes. In summary, if the molecules stay the same it is a physical change, if the molecules change, it is a chemical change.

Name three of the same physical and chemical changes that take place in your life each day.

Making Sense of Secondary Science Rosalind Driver, Ann Squires, Peter Rushworth, Valerie Wood-Robinson, 2014-09-19 What ideas do children hold about the natural world How do these ideas affect their learning of science Young learners bring to the classroom knowledge and ideas about many aspects of the natural world constructed from their experiences of education and from outside school These ideas contribute to subsequent learning and research has shown that teaching of science is unlikely to be effective unless it takes learners perspectives into account Making Sense of Secondary Science provides a concise accessible summary of international research into learners ideas about science presenting evidence based insight into the conceptions that learners hold before and even despite teaching With expert summaries from across the science domains it covers research findings from life and living processes materials and their properties and physical processes This classic text is essential reading for all trainee secondary elementary and primary school science teachers as well as those researching the science curriculum and science methods who want to deepen their understanding of how learners think and to use these insights to inform teaching strategies It also provides a baseline for researchers wishing to investigate contemporary influences on children s ideas and to study the persistence of these conceptions Both components of Making Sense of Secondary Science this book and the accompanying teacher s resource file Making Sense of Secondary Science Support materials for teachers were developed as a result of a collaborative project between Leeds City Council Department of Education and the Children s Learning in Science Research Group at the University of Leeds UK

Improving Subject Teaching Robin Millar, John Leach, Jonathan Osborne, Mary Ratcliffe, 2006-09-27 In many countries questions are being raised about the quality and value of educational research This book explores the relationship between research and practice in education It looks at the extent to which current practice could be said to be informed by knowledge or ideas generated by research and at the extent to which the use of current practices or the adoption of new ones are or could be supported by research evidence Science education is used as a case study but the issues considered apply to the teaching and learning of any curriculum subject The

book draws on the findings of four inter related research studies and considers how research might be used to establish greater consensus about curriculum how research can inform the design of assessment tools and teaching interventions teachers and other science educators perceptions of the influence of research on their teaching practices and their students learning the extent to which evidence can show that an educational practice works Tools for Teaching Conceptual Understanding, Secondary Julie Stern,Krista Ferraro,Juliet Mohnkern,2017-02-02 Students become experts and innovators through Concept Based teaching Innovators don t invent without understanding how the world works With this foundation they apply conceptual understanding to solve problems We want students to not only retain ideas but relate them to other things they encounter using each new situation to add nuance and sophistication to their thinking Discover how to help learners uncover conceptual relationships and transfer them to new situations Teachers will learn Strategies for introducing conceptual learning to students Four lesson frameworks to help students uncover conceptual relationships How to assess conceptual understanding and How to differentiate concept based instruction **Making Sense of Secondary Science** James Driver,2013-01-11 What ideas do children hold about the natural world How do these ideas affect their learning of science When children begin secondary school they already have knowledge and ideas about many aspects of the natural world from their experiences both in primary classes and outside school These ideas contribute to subsequent learning and research has shown that teaching is unlikely to be effective unless it takes learners perspectives into account Making Sense of Secondary Science Research into Children s Ideas provides a concise accessible summary of the research that has been done internationally in this area The research findings are arranged in three main sections life and living processes materials and their properties and physical processes Much of this material has hitherto been difficult to access and its publication in this convenient form will be welcomed by all science teachers both in initial training and in schools who want to deepen their understanding of how their children think Making Sense of Secondary Science ,1994 **Inside Teaching** Mary M. Kennedy,2006-09-01 Kennedy takes us into the controlled commotion of the classroom revealing how painstakingly teachers plan their lessons and how many different ways things go awry She argues that pedagogical reform proposals that do not acknowledge all of the things teachers need to do are bound to fail
