Seasonal to Decadal Prediction of Marine Ecosystems: Opportunities, Approaches, and Applications Mark R. Payne, Alistair J. Hobday, Brian R. MacKenzie, Desiree Tommasi, 2019-06-28 Tremendous advances in oceanographic observing and modeling systems over the last decade have led to unprecedented developments in the nature of information available to marine science While improvements in observational technologies and networks have garnered much attention remarkable developments in forecasting the ocean have received much less focus Exploiting this new predictive skill to improve scientific understanding generate advice and aid in the management of marine resources is emerging as one of the new challenges of marine science Translating predictions of the physical environment into biological outcomes however is not straightforward Fisheries scientists for example have been trying to understand the links between physics and biology and generate predictions of variables such as recruitment for close to a century with limited success Nevertheless spatial distributions and the timing of key events which have received less focus are often tightly linked to the physical environment and may have management relevant applications The first such forecasts based on this skill are now starting to emerge This Frontiers in Marine Science Research Topic provides a snapshot of the state of the art in Marine Ecological Prediction It covers the opportunities for developing such forecasts technical approaches that could be employed and examples where the technology is already being applied This body of work therefore marks an important milestone on the route to developing this new and exciting field of marine science

Ventilation of Normobaric and Hyperbaric Objects Ryszard Kłos, 2021-03-23 Considering the increased need to test and develop ventilation both for normobaric and hyperbaric use in underwater technology industries diving equipment submarines and other underwater facilities mining and other relevant industries this book presents a complete study in the field of normobaric and hyperbaric ventilation It focuses on development and verification of the research based mathematical modeling approach for deterministic modeling of ventilation processes both for objects with semi closed and closed circulation of breathing gas It also proposes validated analytical models of ventilation processes and a new type of carbon dioxide emission simulator that was also developed

Features Describes ventilation processes by replacing semi empirical models with more accurate analytical models Includes concepts based on deterministic models cause and effect models Focuses on analytical mathematical model of the ventilation process Covers both the objects with semi closed and closed circulation of breathing gas for hyperbaric and normobaric conditions Summarizes relevant research results and their validation in real conditions and implemented into operational practice This book is aimed at researchers professionals and graduate students in hyperbaric facility processing building ventilation processing life support system design shipbuilding marine engineering and diving submarine safety Military Psychology Carrie H. Kennedy, Eric A. Zillmer, Eric Zillmer, 2022-08-19 With more than 60% new material reflecting advances in evidence based treatments and the evolving roles of military mental health providers the authoritative resource in the field is now in a significantly revised third edition The volume provides research based roadmaps for prevention and intervention with service members and veterans in diverse settings Grounded in knowledge about stress and resilience chapters describe best practices in treating such challenges as depression anxiety posttraumatic stress disorder and substance use disorders Also addressed are operational functions of psychologists in personnel assessment and selection counterintelligence and other areas Military Review ,2018 *Coastal Extension of CMEMS Products. Models, Data and Applications* Agustin Sanchez-Arcilla, Joanna Staneva, Manuel Espino Infantes, Enrique Alvarez Fanjul, 2022-05-06 *Gluten-Related Disorders: Pathogenesis, Diagnosis, and Treatment* Simone Baldi, Amedeo Amedei, Isabel Comino, Ángela Ruiz-Carnicer, Carolina Sousa, 2025-03-26 Celiac disease CD is an autoimmune condition triggered by gluten consumption in individuals with a genetic predisposition It is characterized by villous atrophy intraepithelial lymphocytosis and crypt hyperplasia of the small bowel This condition is marked by chronic inflammation which can be resolved by eliminating gluten containing foods from the diet known as a gluten free diet GFD Although CD primarily affects the small intestine it exhibits a wide range of symptoms including both intestinal and extraintestinal symptoms which can also range from mild to severe and even include subclinical forms Based on more recent epidemiological data loss of gluten tolerance may occur at the time of its introduction into the diet or at any time in life suggesting that other environmental factors must play a role in CD development Specifically an imbalance of the gut microbiota composition and a consequent dysregulated intestinal metabolic profile including an altered short chain fatty acids production has recently been related to CD onset Even non celiac gluten wheat sensitivity NCGS WS is a clinical entity characterized by intestinal and extraintestinal symptoms induced by gluten ingestion but it occurs in the absence of wheat allergy or CD The pathogenesis of NCGS WS is still uncertain since several different substances other than gluten such as fermentable oligo di monosaccharides and polyols may be involved in its onset Lastly concerning CD celiac disease it has also been suggested that impaired intestinal barrier function increased permeability and gut dysbiosis are important factors in the development of NCGS or WS development Gluten related disorders are heterogeneous conditions and thus require a multidisciplinary approach for a better understanding and management The

absence of a conclusive diagnosis often results in decreased adherence to GFD which can negatively affect the health of those who truly suffer from gluten related disorders Novel insights into pathomechanisms novel biomarkers and additional therapeutic strategies are urgently needed to detect a pathological response more efficiently to gluten to improve clinical diagnosis and management of these diseases Therefore this Research Topic aims to provide new insights into the pathogenesis diagnosis and management of gluten related disorders
