Stopping the Spies Jane Duncan,2018-06-01

Is South Africa on its way to becoming a surveillance state and will it need a whistleblower In 2013 former National Security Agency NSA contractor Edward Snowden leaked secret documents revealing that state agencies like the NSA had spied on the communications of millions of innocent citizens International outrage resulted but the Snowden documents revealed only the tip of the surveillance iceberg Apart from insisting on their rights to tap into communications more and more states are placing citizens under surveillance tracking their movements and transactions with public and private institutions The state is becoming like a one way mirror where it can see more of what its citizens do and say while citizens see less and less of what the state does owing to high levels of secrecy around surveillance In this book Jane Duncan assesses the relevance of

Snowden's revelations for South Africa In doing so she questions the extent to which South Africa is becoming a surveillance society governed by a surveillance state Duncan challenges members of civil society to be concerned about and to act on the ever expanding surveillance capacities of the South African state Is surveillance used for the democratic purpose of making people safer or is it being used for the repressive purpose of social control especially of those considered to be politically threatening to ruling interests She explores the forms of collective action needed to ensure that unaccountable surveillance does not take place and examines what does and does not work when it comes to developing organised responses

book is the result of a careful selection of contributors in the field of CFD. It is divided into three sections according to the purpose and approaches used in the development of the contributions. The first section describes the high performance computing HPC tools and their impact on CFD modeling. The second section is dedicated to CFD models for local and large scale industrial phenomena. Two types of approaches are basically contained here: one concerns the adaptation from global to local scale e.g. the applications of CFD to study the climate changes and the adaptations to local scale. The second approach very challenging is the multiscale analysis. The third section is devoted to CFD in numerical modeling approach for experimental cases. Its chapters emphasize on the numerical approach of the mathematical models associated to few experimental industrial cases. Here the impact and the importance of the mathematical modeling in CFD are focused on. It is expected that the collection of these chapters will enrich the state of the art in the CFD domain and its applications in a lot of fields. This collection proves that CFD is a highly interdisciplinary research area which lies at the interface of physics, engineering, applied mathematics and computer science.

Prevention, Mitigation, and Relief of Compound and Chained Natural Hazards, volume II Qi Yao, Xiangli He, Wentao Yang, Wenwen Qi, Sansar Raj Meena, Chong Xu, Liam Taylor, 2025-05-29. The field of natural hazard research has become increasingly critical due to the intensification of global climate and environmental changes which have led to the frequent occurrence of natural hazards. These hazards often overlap, interact or occur in a chain reaction resulting in significant disaster losses with wide ranging

impacts over extended periods Major earthquakes geological hazards extreme meteorological events large scale floods droughts marine disasters and forest and grassland fires are among the key factors affecting human safety and economic development worldwide Recent studies have highlighted the need for advanced perception intelligent early warning systems accurate prevention strategies and efficient rescue operations to mitigate these hazards However there remain significant gaps in understanding the compound and chained relationships between different types of natural hazards necessitating further investigation and innovative approaches

Advances in Modeling, Assessment, and Prevention of Geotechnical and Geological Disasters Xiaodong Fu,Yongtao Yang,Min Wang,Zetian Zhang,2022-10-19 Failure Analysis and Risk Assessment of Natural Disasters Through Machine Learning and Numerical Simulation, volume IV Faming Huang,Peng Zeng,Sansar Raj Meena, Jiawei Xie,2025-08-26

Natural disasters which include landslides rock falls rainstorms floods and earthquakes appear as results of the progressive or extreme evolution of climatic tectonic and geomorphological processes and human engineering activities It is significant to explore the failure mechanism and carry out spatial modeling of these natural disasters due to their serious harm to the safety of people s lives and property Various advanced methods including successful remote sensing geographic information systems machine learning models and numerical simulation techniques are promising tools to analyze these complex disasters Machine Learning models such as neuro fuzzy logic decision trees artificial neural networks deep learning and evolutionary algorithms are characterized by their abilities to produce knowledge and discover hidden and unknown patterns and trends from large databases whereas remote sensing and Geographic Information Systems appear as significant technology equipped with tools for data manipulation and advanced mathematical modeling What is more numerical simulation can also be acknowledged as an advanced technology for discovering hidden failure mechanisms of disasters
