Thalgott, John K. Webb, 2012-12-06 This book has become necessary as a consequence of the rapid expansion of the surgical procedures and implants available for spinal surgery within the AO Group We have not attempted to write an in depth book on spinal surgery but one which will help the surgeon in the use of AO concepts and implants We consider the practical courses held all over the world essential for the teaching of sound techniques so that technical complications and poor results can be avoided for both the surgeon and in particular the patient This book is a practical manual and an outline of what is taught in the courses It is intended to help the young spinal surgeon to understand the correct use of AO implants The indications given will aid the correct use of each procedure It must be strongly emphasized that surgery of the spine is technically demanding The techniques described in this book should only be undertaken by surgeons who are trained and experienced in spinal surgery Certain techniques in particular pedicle screw fixation and cages have not yet been fully approved by the FDA in the United States However throughout the rest of the

world the use of pedicle screws has become a standard technique for the spine surgeon since it has been shown to improve fixation techniques and allow segmental correction of the spine The use of cages has become more and more popular specifically as a tool of minimally invasive spinal surgery

Technique of Internal Fixation of Fractures M. E. Müller,W. Bandi,H. R. Bloch,M. Allgöwer,A. Mumenthaler,H. Willenegger,R. Schneider,S. Steinemann,F. Straumann,B. G. Weber,2012-12-06 It is to the great and lasting credit of LORENZ BOHLER and his school that they have in the last decade developed and demonstrated so thoroughly the techniques for the conservative management of fractures Nevertheless there have always been many including some from BOHLER S school who have found considerable place for surgical management and with the significant progress in general surgery seen in postwar years a new stimulus has been given to this part of traumatic surgery especially since bone injuries have become more complex and frequent The concept of internal fixation is not new The serious criticisms that have been levelled at it retain today their basic significance Progress in the fields of asepsis corrosion free metal implants operative experience and postoperative care has diminished the dangers but has not relieved the surgeon of responsibility The Association for the Study of the Problems of Internal Fixation AO has devoted itself over a number of years to the basic principles and best methods of open treatment of fractures by means of extended clinical and scientific studies in order to determine in each individual case the most promising line of treatment At the same time a well designed and tested instrument set has been developed with precise instructions for the appropriate techniques As a result the new observations about primary bone healing which have emerged from the practice of rigid internal fixation are as interesting as the uses to which they can be put in allowing early mobilization
