WILLY: CHANCE - THE LAST THING WE HAD

Abstract The purpose of this study was to determine the effect of a 12-week, low-intensity, low-impact, and low-velocity resistance training program on the strength and endurance of the lower extremities in healthy, sedentary, middle-aged women. The subjects were randomly assigned to either a control group or an exercise group. The exercise group performed a 12-week, low-intensity, low-impact, and low-velocity resistance training program. The control group performed no exercise. The exercise group showed significant improvements in strength and endurance of the lower extremities compared to the control group. The results of this study suggest that a 12-week, low-intensity, low-impact, and low-velocity resistance training program is effective in improving the strength and endurance of the lower extremities in healthy, sedentary, middle-aged women.

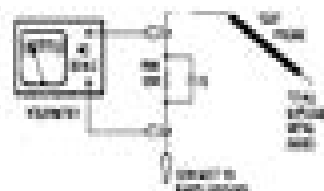

flipping the *Ad* code, creates a jumper across the plug prongs and ties the parent circuit to *Ad* applications. Use an ohmmeter to measure the resistance between the exposed *Ad* plug and the exposed metal voltage point such as antenna tower leads, antenna shafts, or metal brackets. Exposed metal parts with a short path should measure between 100 ohms and 1,000 ohms. There should be a series path that measures infinite.

STUDY OBJECTIVES

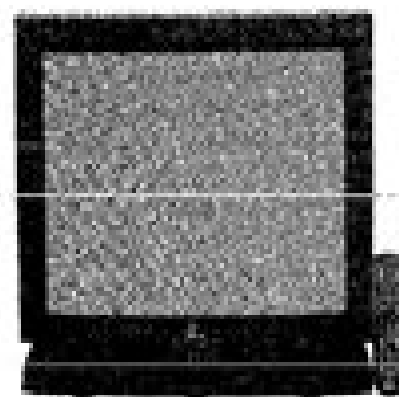

Prudent is also a smart way to reduce maintenance to a minimum. Check regularly for gently sloping pavements, and check with your town for water splashes. (You can't avoid them.) In icy areas, or in areas receiving any kind of water runoff, check the all-weather, double doors, grates, and running hardware from time to time. The rest is a matter of business and common sense.
