 Lawson,M.J. Formolo,J.M. Eiler,2018-03-28 Hydrocarbon systems by nature are a complex interplay of elements that must be
 spatially and temporally aligned to result in the generation and preservation of subsurface hydrocarbon accumulations To
 meet the increasing challenges of discovering hydrocarbon resources it is essential that we advance our understanding of
 these systems through new geochemical approaches and analytical developments Such development requires that academic
 and industry led research efforts converge in ways that are unique to the geosciences The aim of this volume is to bring
 together a multidisciplinary geochemical community from industry and academia working in hydrocarbon systems to publish
 recent advances and state of the art approaches to resolve the many remaining questions in hydrocarbon systems analysis
 From Source to Seep presents geochemical and isotopic studies that are grouped into three themes 1 source rock
 identification and the temperature timing of hydrocarbon generation 2 mechanisms and time scales associated with
 hydrocarbon migration trapping storage and alteration and 3 the impact of fluid flow on reservoir properties Government
