Seapath™ 100

KONGSBERG

Integrated Heading, Attitude and Positioning Sensor

The Seatex Seapath 100 blends the best features of strapdown inertial navigation systems and GPS positioning into a robust and cost effective integrated position, velocity, attitude and heading sensor. The Seapath 100 replaces several vessel instruments with one accurate and compact navigation package (gyrocompass, GPS system, speed log and motion sensor). Based on the proven Seapath 200 product used extensively in the offshore and hydrographic industries, the Seapath 100 utilises a more cost effective motion sensor (MRU H) and shorter GPS antenna baseline to reduce the overall system cost.

Versatile technology

The Seapath uses two elements to determine vessel heading, position, velocity and motion information, a GPS element and an inertial element. Precision heading is derived from a fixed-baseline dual GPS antenna arrangement, using carrier phase data to generate heading information independent of latitude and vessel dynamics. Heading supplied from this integrated solution yields better accuracy than a conventional gyrocompass. GPS position and velocity is calculated from both of the GPS antennas and gives a redundant system. DGPS signals may be input to the Seapath to improve position and velocity accuracies.

The inertial sensor element of the Seapath provides precise, real-time orientation and linear acceleration data even in dynamic environments. Velocity data from the GPS element updates the inertial sensor and minimises sensor errors due to vessel turns and manoeuvres. In case of short GPS outages, the inertial sensor automatically takes over as the prime source, using its internal sensors to calculate heading and position until the GPS comes back on line. Working together seamlessly, the inertial and GPS elements of the Seapath system insure accurate, continuous and robust heading, position and motion information.

The Seapath requires no scheduled maintenance or recalibration. Seapath offers flexible configuration of the output variables and interface set-up, depending on the vessel and application. It is easy to operate, install and calibrate.

ADCP Work

An application example that can take advantage of this cost effective product is high accuracy ADCP (Acoustic Doppler Current Profiler) work at deep waters without a bottom track. By determining the vessel's velocity from the integrated DGPS and inertial system, the Seapath 100 measures vessel velocity at a high update rate with an accuracy of 0.05 m/s RMS, independent of environmental conditions at any depth. The Seapath 100 offers all the measurements required to achieve accurate ADCP measurements for all depths and even during difficult weather conditions.

Typical applications

- Vessel mounted ADCP motion compensation
- High speed vessel navigation
- Echo sounders and sonar motion compensation
- Vessel position and attitude monitoring
