

Genetics: The Science of Heredity QUIZ STUDY GUIDE

VOCABULARY:

1. A **GENE** is a "factor" that controls a trait.
2. An **ALLELE** is a different form of a gene.
3. A **HYBRID OR HETEROZYGOUS** organism has two different alleles for a trait.
4. A **DOMINANT** allele is one whose trait always shows up in the organism; "stronger"
5. A **RECESSIVE** allele is one that is hidden or masked; "weaker"
6. **GENETICS** is the study of heredity.
7. **HEREDITY** is the passing of genetic traits from parent to offspring.
8. A chart that describes all the ways alleles can combine in a genetic cross is called a(n) **PUNNETT SQUARE**.
9. An organism's **PHENOTYPE** refers to its **physical appearance** or visible traits.
10. An organism's **GENOTYPE** refers to its **genetic make-up** or the alleles it has.
11. What is an organism called for having two identical alleles for a trait? **HOMOZYGOUS (hh OR HH)**
12. What is an organism called for having two different alleles for a trait? **HETEROZYGOUS (Hh)**

PUNNETT SQUARE PRACTICE:

Use with #13-14: Let's say that in cats, the gene for the length of the tail has two alleles. The dominant allele (T) codes for long tails and the recessive allele (t) codes for short tails.

13. What is the probability of producing offspring that have short tails from a cross of two long tailed cats, one that is *homozygous dominant (TT)* and one that is *heterozygous (Tt)*? Show your work on the Punnett square.

100% LONG TAILS

0% SHORT TAILS

	T	T
T	TT	TT
t	Tt	Tt

14. If one parent cat is *heterozygous long-tailed (Tt)* and the other is *short tailed (tt)*, what is the probability that the offspring will have short tails?

50% LONG TAILS

50% SHORT TAILS

	T	t
t	Tt	tt
t	Tt	tt

15. In unicorns, two horns (H) is dominant and one horn (h) is recessive. Complete the Punnett square to show the cross of *two hybrid (Hh)* unicorns. Summarize the genotypes and phenotypes of the possible offspring.

POSSIBLE GENOTYPES: HH, Hh, AND hh

POSSIBLE PHENOTYPES: TWO HORNS AND ONE HORN

SUMMARY: Based on the information from the Punnett Square we can predict that 75% of the offspring would have two horns because they all have a dominant allele. We can also predict that 25% would have one horn because they have two recessive alleles.

Shifting Standards Allan Franklin, 2018-11-24 In Shifting Standards Allan Franklin provides an overview of notable experiments in particle physics Using papers published in Physical Review the journal of the American Physical Society as his basis Franklin details the experiments themselves their data collection the events witnessed and the interpretation of results From these papers he distills the dramatic changes to particle physics experimentation from 1894 through 2009 Franklin develops a framework for his analysis viewing each example according to exclusion and selection of data possible experimenter bias details of the experimental apparatus size of the data set apparatus and number of authors rates of data taking along with analysis and reduction distinction between ideal and actual experiments historical accounts of previous experiments and personal

comments and style From Millikan's tabletop oil drop experiment to the Compact Muon Solenoid apparatus measuring approximately 4 000 cubic meters not including accelerators and employing over 2 000 authors Franklin's study follows the decade by decade evolution of scale and standards in particle physics experimentation As he shows where once there were only one or two collaborators now it literally takes a village Similar changes are seen in data collection in 1909 Millikan's data set took 175 oil drops of which he used 23 to determine the value of e the charge of the electron in contrast the 1988 1992 E791 experiment using the Collider Detector at Fermilab investigating the hadroproduction of charm quarks recorded 20 billion events As we also see data collection took a quantum leap in the 1950s with the use of computers Events are now recorded at rates as of a few hundred per second and analysis rates have progressed similarly Employing his epistemology of experimentation Franklin deconstructs each example to view the arguments offered and the correctness of the results Overall he finds that despite the metamorphosis of the process the role of experimentation has remained remarkably consistent through the years to test theories and provide factual basis for scientific knowledge to encourage new theories and to reveal new phenomenon
