Infrasound Monitoring for Atmospheric Studies Alexis Le Pichon, Elisabeth Blanc, Alain Hauchecorne, 2010-01-19 The use of infrasound to monitor the atmosphere has like infrasound itself gone largely unheard of through the years But it has many applications and it is about time that a book is being devoted to this fascinating subject Our own involvement with infrasound occurred as graduate students of Prof William Donn who had established an infrasound array at the Lamont Doherty Geological Observatory now the Lamont Doherty Earth Observatory of Columbia University It was a natural outgrowth of another major activity at Lamont using seismic waves to explore the Earth's interior Both the atmosphere and the solid Earth feature velocity seismic or acoustic gradients in the vertical which act to refract the respective waves The refraction in turn allows one to calculate the respective background structure in these mediums indirectly exploring locations that are hard to observe otherwise Monitoring these signals also allows one to discover various phenomena both natural and man made some of which have military applications
