**BIG IDEA:** Atmosphere is the layer of gases surrounding the Earth. It is composed of different layers based on its temperature.

### Layers of the Atmosphere

The **Troposphere** is the layer closest to the earth's surface with an average height of 13 km. It is the region where almost all the weather conditions take place. Its temperature generally decreases with increasing altitude.

The **Stratosphere** has a very thin air and intensely heated by the sun's rays that is why the temperature increases with altitude. It starts just above the troposphere with an average height of 50 km above the earth's surface. It is the region where the ozone layer formed.

The **Mesosphere** is directly above the stratosphere, it extends from about 50 to 80 km. Its temperature decreases with increasing altitude and is considered as the coldest layer of the atmosphere. When meteors reached this layer, the meteors burned up into smaller fragments.

The **Thermosphere's** temperature increases extremely high with altitude. It is the region where the famous aurora borealis formed. The altitude range is about 85km to 500km.

The **Exosphere** is the outermost layer of the earth's atmosphere. It extends from the top of the thermosphere to 10,000 km above the earth.

III. DIRECTIONS: Label each layer with the appropriate name and write the correct temperature range and altitude range of each layer opposite their name. Choose your answer in the box below.

**An Appeal to Reason** Nigel Lawson, 2009-12-29 His insights are keen and refreshingly iconoclastic. A contrarian synthesis of political thinking and economic analysis on the topic of climate change. Publishers Weekly. In this well-informed and hard-hitting response to the scaremongering of the climate alarmists, Nigel Lawson, former Secretary of State for Energy under Margaret Thatcher, argues that it is time for us to take a cool look at global warming. Lawson carefully and succinctly examines all aspects of the global warming issue: the science, the economics, the politics, and the ethics. He concludes that the conventional wisdom on the subject is suspect on a number of grounds: that global warming is not the devastating threat to the planet it is widely alleged to be, and that the remedy being proposed, which is in any event politically unattainable, would be worse than the threat it is supposed to avert. Argued with logic, common sense, and even wit, and thoroughly sourced and referenced, this is a long-overdue corrective to the barrage of spin and hype to which the politicians and media have been subjecting the public on this important issue.
