The decisions courts make in constitutional rights cases pervade our political life and touch on our most basic interests and values The spread of judicial review of legislation around the world means that courts are increasingly called on to settle matters of moral and political controversy including assisted suicide data privacy anti terrorism measures marriage and abortion But doubts regarding the institutional capacities of courts for deciding such questions are growing Judges now regularly review social science research to assess whether a law will effectively achieve its aim and at what cost to other interests They cite studies and statistical information from psychology sociology medicine and other disciplines in which they are rarely trained This empirical reasoning proceeds alongside open ended moral reasoning with judges employing terms such as equality liberty and autonomy then determining what these require in concrete circumstances This book shows that courts were not designed for this kind of moral and empirical reasoning It argues that in comparison to legislatures the institutional capacities of courts are deficient Legislatures are better equipped than courts for deliberating and decision making in regard to the kinds of factual and moral issues that arise in constitutional rights cases The book concludes by considering the implications of comparative institutional capacity for constitutional design Is a system of judicial review of legislation something that constitutional framers should choose to adopt If so in what form For countries with systems of judicial review practical proposals are made to remedy deficiencies in the institutional capacities of courts **Discover Sociology: Core Concepts** Daina S. Incomplete Streets Stephen Zavestoski, Julian Agyeman, 2014-08-27 The Complete Streets concept and movement in urban planning and policy has been hailed by many as a revolution that aims to challenge the auto normative paradigm by reversing the broader effects of an urban form shaped by the logic of keeping automobiles moving By enabling safe access for all users Complete Streets promise to make cities more walkable and livable and at the same time more sustainable This book problematizes the Complete Streets concept by suggesting that streets should not be thought of as merely physical spaces but as symbolic and social spaces When important social and symbolic narratives are missing from the discourse and practice of Complete Streets what actually results are incomplete streets The volume questions whether the ways in which complete streets narratives policies plans and efforts are envisioned and implemented might be systematically reproducing many of the urban spatial and social inequalities and injustices that have characterized cities for the last century or more From critiques of a mobility bias rooted in the neoliberal foundations of the Complete Streets concept to concerns about resulting environmental gentrification the chapters in Incomplete Streets variously call for planning processes that give voice to the historically marginalized and more broadly that approach streets as dynamic fluid and public social places This interdisciplinary book is aimed at students researchers and professionals in the fields of urban geography environmental studies urban planning and policy transportation planning and urban sociology
