Moving Cellular Material

Key Concept How do materials enter and leave cells?

Directions: On each line, write the term from the word bank that correctly completes each sentence. Each term is used only once.

- 1. the movement of substances from an area of higher concentration to an area of lower concentration
 2. transport proteins that carry large molecules, such as sugar molecules, through a cell membrane
 3. the state a substance is in when the concentration of the substance is the same on both sides of a cell membrane
 4. when a cell takes in a substance by surrounding it with the cell membrane
- 5. the diffusion of water molecules only
- when the cell membrane uses special transport proteins to move materials through the cell membrane
- transport proteins that form pores through a cell membrane that allow small molecules to pass through
- the movement of substances through a cell membrane by using the cell's energy
 - proteins that assist with the transport of molecules through a cell membrane
- 10. when a cell's vesicles release their contents outside the cell
- what a cell membrane is because it allows only certain substances to enter or leave a cell
- 12. the movement of substances through a cell membrane without using the cell's energy

- A. semipermeable
- B. passive transport
- C. diffusion
- D. equilibrium
- E. osmosis
- F. facilitated diffusion
- G. transport proteins
- H. carrier proteins
- L. channel proteins
- J. active transport
- K. endocytosis

Computational Fluid and Solid Mechanics 2003 K.J Bathe, 2003-06-02 Bringing together the world's leading researchers and practitioners of computational mechanics these new volumes meet and build on the eight key challenges for research and development in computational mechanics Researchers have recently identified eight critical research tasks facing the field of computational mechanics These tasks have come about because it appears possible to reach a new level of mathematical modelling and numerical solution that will lead to a much deeper understanding of nature and to great improvements in engineering design The eight tasks are The automatic solution of mathematical models Effective numerical schemes for fluid flows The development of an effective mesh free numerical solution method The development of numerical procedures for multiphysics problems The development of numerical procedures for multiscale problems The modelling of uncertainties The analysis of complete life cycles of systems Education teaching sound engineering and scientific judgement Readers of Computational Fluid and Solid Mechanics 2003 will be able to apply the combined experience of many of the world's leading researchers to their own research needs Those in academic environments will gain a better insight into the

needs and constraints of the industries they are involved with those in industry will gain a competitive advantage by gaining insight into the cutting edge research being carried out by colleagues in academia Features Bridges the gap between academic researchers and practitioners in industry Outlines the eight main challenges facing Research and Design in Computational mechanics and offers new insights into the shifting the research agenda Provides a vision of how strong basic and exciting education at university can be harmonized with life long learning to obtain maximum value from the new powerful tools of analysis Applied Mechanics Reviews ,1967 Official Gazette of the United States Patent Office United States.
