Loconto, 2022-04-11 Laboratory Experiments in Trace Environmental Quantitative Analysis is a collection of student tested experiments that introduce important principles that underlie various laboratory techniques in the field of trace environmental organics and inorganics quantitative analysis It crosses the more traditional academic disciplines of environmental science and analytical chemistry The text is organized to begin with minimally rigorous session experiments

and increase in rigor as each session experiment unfolds Each experiment features learning objectives expected student outcomes and suggestions for further study Additional features include Students are introduced to the principles and laboratory practice of instrumental analysis determinative techniques that are clearly presented Students are carefully taken through various ways to prepare samples for trace quantitative analysis sample prep techniques Safety warnings are listed within each experiment Students are introduced to all three types of instrument calibration external internal and standard addition Instructors who are responsible for laboratory courses in analytical chemistry with potential application to environmental sample matrices will find this textbook of value Graduate programs in environmental science and engineering will also greatly benefit from the content

high cost of genomic sequencing and other molecular technologies remains a limiting factor in the common implementation of these methods for diagnosis and research of rare diseases in resource limited settings The study of rare genetic diseases in LMICs may be underestimated when compared to large scale genomic studies performed in developed countries despite being performed under much strained circumstances Consequently research publications on the genetics of RDs within LMICs might be underrepresented in the literature limiting the understanding of genetic and phenotypic variability across populations and contributing to the lack of representation of non European individuals in genetic studies This Research Topic aims to provide an opportunity for researchers and clinicians from LMICs who are dedicated to the study of rare genetic disorders to share their findings with the global genetics scientific community as well as their challenges and perspectives on the implementation of modern technologies and approaches for the diagnosis and study of rare genetic disorders
