**Advancements in Biomass Feedstock Preprocessing: Conversion Ready Feedstocks** J.

Richard Hess,Allison E. Ray,Timothy G. Rials,2020-03-12 The success of lignocellulosic biofuels and biochemical industries depends upon an economic and reliable supply of quality biomass However research and development efforts have historically focused on the utilization of agriculturally derived cellulosic feedstocks without consideration of their low energy density high variations in physical and chemical characteristics and potential supply risks in terms of availability and affordability This Research Topic will explore strategies that enable supply chain improvements in biomass quality and consistency through blending preprocessing diversity and landscape design for development of conversion ready lignocellulosic feedstocks for production of biofuels and bio products Biomass variability has proven a formidable challenge to the emerging biorefining industry impeding continuous operation and reducing yields required for economical production of lignocellulosic biofuels at scale Conventional supply systems lack the preprocessing capabilities necessary to ensure consistent biomass feedstocks with physical and chemical properties that are compatible with supply chain operations and conversion processes Direct coupling of conventional feedstock supply systems with sophisticated conversion systems has reduced the operability of biorefining processes to less than 50% As the bioeconomy grows the inherent variability of biomass resources cannot be managed by passive means alone As such there is a need to fully recognize the magnitude of

biomass variability and uncertainty as well as the cost of failing to design feedstock supply systems that can mitigate biomass variability and uncertainty A paradigm shift is needed from biorefinery designs using raw single resource biomass to advanced feedstock supply systems that harness diverse biomass resources to enable supply chain resilience and development of conversion ready feedstocks Blending and preprocessing e g drying sorting sizing fractionation leaching densification etc can mitigate variable quality and performance in diverse resources when integrated with downstream conversion systems Decoupling feedstock supply from biorefining provides an opportunity to manage supply risks and incorporate value added upgrading to develop feedstocks with improved convertibility and or market fungibility Conversion ready feedstocks have undergone the required preprocessing to ensure compatibility with conversion and utilization prior to delivery at the biorefinery and represent lignocellulosic biomass with physical and chemical properties that are tailored to meet the requirements of industrially relevant handling and conversion systems Drying, Roasting, and Calcining of Minerals Thomas Battle,Jerome Downey,Lawrence May,Boyd Davis,Neale Neelameggham,Sergio Sanchez-Segado,Chris Pistorius,2016-12-01 The papers in this volume give the reader focused information on the important extractive metallurgy unit operations of drying roasting and calcining **MXenes** Yury Gogotsi,2023-08-24 Since their discovery in 2011 MXenes 2D carbides nitrides and carbonitrides of early transition metals have developed into one of the largest and most intensively studied families of 2D materials They offer unique properties and are being explored in a large variety of applications This book compiles the most important research from a pioneer of the field Professor Yury Gogotsi and his interdisciplinary research team as well as numerous collaborators worldwide It reports on the discovery and rise of MXenes and describes their synthesis and processing properties and incorporation into polymer ceramic and metal matrices to produce composites It also discusses the potential of MXenes for use in energy storage optics electronics and sensing as well as biomedical environmental and electrocatalysis applications The book will appeal to anyone interested in nanomaterials and their synthesis properties and applications Solving Complex Ocean Challenges Through Interdisciplinary Research: Advances from Early Career Marine Scientists Stephanie Brodie,Christopher Cvitanovic,Maria Grazia Pennino,Jon Lopez,André Frainer,Kelly Ortega-Cisneros,Natasa Maria Vaidianu,Samiya Ahmed Selim,Sabine Mathesius,2022-06-01 The Topic Editors Stephanie Brodie Christopher Cvitanovic Maria Grazia Pennino Jon Lopez and Andr Frainer declare that they are members of the IMBeR Integrated Marine Biosphere Research network and IMECaN Interdisciplinary Marine Early Career Network and are collaborating with the IMBeR research community Advances in Agronomy ,2024-02-07 Advances in Agronomy Volume 184 the latest release in this leading reference on agronomy contains a variety of updates and highlights new advances in the field Each chapter is written by an international board of authors with this new release including new chapters on The Role of Artificial Intelligence in Crop Improvement Dealing with the Impact of Climate Change Induced Drought on the Management of Soil Challenges and Emerging Opportunities of Weed Management in Organic Agriculture
