**The Risk Perception of Artificial Intelligence** Hugo Neri, 2020-12-16 In *The Risk Perception of Artificial Intelligence*

Hugo Neri examines how society has come to understand artificial intelligence by studying how cultural productions intellectuals and the media have shaped society's views, understandings and fears of artificial intelligence. As an abstract term, artificial intelligence has been understood both as a discipline and a robot's mind. In the twenty and twenty-first centuries, cultural representations in comics, television shows and movies converged with public lectures about the risks of AI by prominent public figures such as Stephen Hawking and Elon Musk. Neri analyzes how this cultural and intellectual miscellany shapes the way we perceive artificial intelligence and whether this perception is universal or restricted to the Western world.

*The War Within - Between Good and Evil* Bhimeswara Challa, The human has always prided himself as an exceptional moral species but has always been haunted by two questions: Why am I not good when I want to be? Why do I do bad when I don't want to? This is at the heart of what scriptures and sages have long alluded to as the eternal internal struggle between good and evil that wages in the human consciousness. The book posits that much of our confusion and angst stems from our inability to recognize the ramifications of this war between two sides of our own self. It is because we are ignoring this war between two sides of our own self that we are losing all other wars of the world. That ignorance is the primary source of all the horrors, malevolence and violence that fill us with so much dread. But a favorable outcome is possible only if the forces of goodness are aided to get an upper hand consistently and that calls for two cathartic changes: consciousness change by inducing a turn from the mind to the heart and contextual change by radically reconstructing the roles of morality, money and mortality in our everyday lives. The book offers a menu of insights and options we all can use to tilt the scales in the war waging inside each of us.

**The History and Future of Technology** Robert U. Ayres, 2021-07-27 Eminent physicist and economist Robert Ayres examines the history of technology as a change agent in society, focusing on societal roots rather than technology as an autonomous self-perpetuating phenomenon. With rare exceptions, technology is developed in response to societal needs that have evolutionary roots and causes. In our genus, Homo language evolved in response to a need for our ancestors to communicate both in the moment and to posterity. A band of hunters had no chance in competition with predators that were larger and faster without this type of organization, which eventually gave birth to writing and music. The steam engine did not leap fully formed from the brain of James Watt. It evolved from a need to pump water out of coal mines, driven by a need to burn coal instead of firewood in turn due to deforestation. Later, the steam engine made machines and mechanization possible. Even quite simple machines increased human productivity by a factor of hundreds if not thousands. That was the Industrial Revolution. If we count electricity and the automobile as a second industrial revolution and the digital computer as the beginning of a third, the world is now on the cusp of a fourth revolution led by microbiology. These industrial revolutions have benefited many in the short term but devastated the Earth's ecosystems. Can technology save the human race from the catastrophic consequences of its past success? That is the question this book will try to answer.

Hoveyda,2000-07-30 In 1917 the French poet Guillaume Apollinaire predicted the death of books in one or two centuries and their replacement by film and sound In the early sixties Marshall McLuhan proclaimed the end of the Gutenberg Galaxy Neither of these predictions has yet happened Nonetheless the development of computer science and the spread of the Internet have already changed the landscape of the media and affected the fields of book publishing journalism cinema and television In his new book Hoveyda who was involved with cinema and literature for many years scrutinizes the relationship between the different forms of media and art Drawing on his varied experience as well as on his knowledge of the arts and media he explains how cinema literally existed before literature or articulate language and that all other forms of communication stem from this innate capability to think cinematically Looking at the extraordinary technological developments in the fields of cinema television and communications Hoveyda finds a hidden purpose behind them a kind of common thread that illustrates and explains the quest of humans for communication As far back as one can go Hoveyda finds that humans were always preoccupied with the question of how to communicate what was going on in their minds They tried and found ways of transmitting to one another the impressions and ideas churning in their heads Prehistoric cave drawings hieroglyphs literature and canvas paintings were and are part of such attempts This progression of inventions seems to pursue a linear path toward externalization of their people s thoughts and dreams The pinnacle of this externalization will be reached when it becomes automatic and foregoes the use of heavy equipment Bunuel once told the author and his friends that he dreamt of the day when he would sit in a darkened room and project on a wall the film he was concocting in his head This is exactly the goal of the technological progress we witness Hoveyda s survey also includes a description of the evolution of modern cinema as he witnessed it some new and revolutionary remarks about film appreciation and filmmaking discussion of television and how it differs from cinema and observations on the impact of media on one another as well as the influence of the more recent technologies on narration styles A provocative account that will be of interest to scholars researchers students and anyone involved with the development of communications

*Heart of the Machine* Richard Yonck, 2020-02-11 For Readers of Ray Kurzweil and Michio Kaku a New Look at the Cutting Edge of Artificial Intelligence Imagine a robotic stuffed animal that can read and respond to a child's emotional state a commercial that can recognize and change based on a customer's facial expression or a company that can actually create feelings as though a person were experiencing them naturally *Heart of the Machine* explores the next giant step in the relationship between humans and technology the ability of computers to recognize respond to and even replicate emotions Computers have long been integral to our lives and their advances continue at an exponential rate Many believe that artificial intelligence equal or superior to human intelligence will happen in the not too distant future some even think machine consciousness will follow Futurist Richard Yonck argues that emotion the first most basic and most natural form of communication is at the heart of how we will soon work with and use computers Instilling emotions into computers is the next leap in our centuries old obsession with creating machines that replicate humans But for every benefit this progress may bring to our lives there is a possible pitfall Emotion recognition could lead to advanced surveillance and the same technology that can manipulate our feelings could become a method of mass control And as shown in movies like *Her* and *Ex Machina* our society already holds a deep seated anxiety about what might happen if machines could actually feel and break free from our control *Heart of the Machine* is an exploration of the new and inevitable ways in which mankind and technology will interact The paperback edition has a new foreword by Rana el Kaliouby PhD a pioneer in artificial emotional intelligence as well as the cofounder and CEO of Affectiva the acclaimed AI startup spun off from the MIT Media Lab

*Good and Evil* Bhimeswara Challa, 2021-09-03 By any measure we are at an inflection point in human history As the ongoing coronavirus pandemic has shown it is not only the planet that is at risk but our very destiny We must take an unblinking look at who we are compared with who we want to be or ought to be That entails going within to discover what is happening deep inside our consciousness This book suggests that the root of our troubles is our ignorance that there is a perennial war within each of us between good and evil Like in any war both sides need supplies But in this internal war they must come from outside in

the shape of our daily doings and choices As you read you ll get a roadmap on how to make better decisions and contain the evil within Get answers to questions such as Why must we fix the inside before fixing the outside How can we prevent evil from overwhelming our consciousness How can the good inside of us overwhelm the bad outside There is no nobler calling for any of us at this pivotal point than to volunteer to join others committed to bettering themselves so we can rescue mankind from self annihilation
