

Rate of Reaction

What is the speed of a reaction measured?

Why?

Chemical reactions occur at different speeds. Some are ultrafast (combustion), others require patience. For example, you can leave sodium in your kitchen-drawers until a significant amount has reacted depending on the conditions. In order to study reactions that change the speed of a reaction, we must develop ways of measuring at how the rate of reaction is measured during a reaction.

Model 1 -- Concentration versus Time Graphs

- The graph in Model 1. How does the concentration of a specific chemical species change over time?
 - What unit is the concentration measured in?
(The concentration is measured in molarity.)
 - What unit is the time measured in?
(The time is measured in seconds.)
- Consider the data in Model 1.
 - What specific concentration of the species when the chemical reaction was initiated?
(The initial concentration of the chemical species in the mixture was 0.100M)
 - Did the concentration of the species increase or decrease over time?
(The concentration of the chemical species decreased over time.)
 - Was the species a reactant or product in the reaction? Justify your reasoning.
(The chemical species was a reactant because it was used up during the reaction. Its concentration went down.)

Chemical Pedagogy Keith S Taber, 2024-12-20 How should chemistry be taught in schools colleges and universities Chemical Pedagogy discusses teaching approaches and techniques the reasoning behind them and the evidence for their effectiveness The book surveys a wide range of different pedagogic strategies and tactics that have been recommended to better engage learners and provide more effective chemistry teaching These accounts are supported by an initial introduction to some key ideas and debates about pedagogy the science of teaching Chemical Pedagogy discusses how teaching innovations can be tested to inform research based practice Through this book the author explores the challenges of carrying out valid experimental studies in education and the impediments to generalising study results to diverse teaching and learning contexts As a result the author highlights both the need to read published studies critically and the value of teachers and lecturers testing out recommended innovations in their own classrooms Chemical Pedagogy introduces core principles from research into human cognition and learning to provide a theoretical perspective on how to best teach for engagement and understanding An examination of some of the more contentious debates about pedagogy leads to the advice to seek optimally guided instruction which balances the challenge offered to learners with the level of support provided This provides a framework for discussing a wide range of teaching approaches and techniques that have been recommended to those teaching chemistry across educational levels including both those intended to replace teaching from the front and others that can be built into traditional lecture courses to enhance the learning experience
