Drainage Basin

A **drainage basin** is the area of land drained by a river and its tributaries.

- **Watershed** - the area of surrounding highland that separates different
- **Source** - where the river starts in the highland
- **Mouth** - where a river meets the sea
- **Confluence** - the point at which two rivers meet
- **Tributary** - a small river or stream that joins a larger river
- **Channel** - this is the main flow of the river

Drainage Basin

A **drainage basin** is an area of land that is drained by a river and all of its tributaries. The source is the furthest point of river from its mouth. The watershed marks the boundary between drainage basins. A **tributary** stream is a smaller stream that joins a larger stream or river. Where streams join, this is known as a **confluence**. The river channel is the groove within which the river flows, and the river will eventually flow down to the **mouth** where the river joins the sea.
