Protected Area Governance and Management Graeme L. Worboys, Michael Lockwood, Ashish Kothari, Sue Feary, Ian Pulsford, 2015-04-08 Protected Area Governance and Management presents a compendium of original text case studies and examples from across the world by drawing on the literature and on the knowledge and experience of those involved in protected areas. The book synthesises current knowledge and cutting edge thinking from the diverse branches of practice and learning relevant to protected area governance and management. It is intended as an investment in the skills and competencies of people and consequently the effective governance and management of protected areas for which they are responsible now and into the future. The global success of the protected area concept lies in its shared vision to protect natural and cultural heritage for the long term and organisations such as International Union for the Conservation of Nature are a unifying force in this regard. Nonetheless protected areas are a socio political phenomenon and the ways that nations understand govern and manage them is always open to contest and debate. The book aims to enlighten educate and above all to challenge readers to think deeply about protected areas their future and their past as well as their present. The book has been compiled by 169 authors and deals with all aspects of protected area governance and management. It provides information to support capacity development training of protected area field officers managers in charge and executive level managers.

The Climate Crisis: A Moderate Approach to the Energy Debate Miguel Angel Rondon Segura, 2021-10-22 Are you a climate denier or climate believer? The subject of energy and climate have become so mainstream and intertwined with politics that today's discussion has been split into these two antagonistic buckets leaving no middle ground. You're boxed from the beginning. The Intergovernmental Panel on Climate Change (IPCC) is the United Nations body responsible for assessing the science related to climate change and in their harshest scenario they point to temperatures raising by an average of 6 degrees Celsius by the end of the century. At the same time the goal to limit global warming below 2 degrees Celsius was picked as a consensus figure among the scientific community. The reality is that we do not know the exact impact of exceeding this target and we can only estimate and predict what could happen to the planet based on our interpretation of how systems respond. In this scenario what do we do? Do we destroy the entire energy system as we know it? Do we ignore the potential problem? Or do we apply a business perspective and find solutions that allow us to maintain our lifestyles without the risk of making this planet uninhabitable? This book is about trying to bring the denier and believer sides together to analyze the energy problem from a systems and business perspective by introducing key aspects of the energy debate defining the problem and presenting possible solutions. In essence more profits less carbon.
