## Ocean Currents

### Introduction

When poets and storytellers speak of the ocean they are often struck by its constant, restless motion; from the rolling deep of the open sea to the crashing coastal surf. Even the most casual observer is impressed by the swirl of tides or the march of waves against the shore. But few note the silent, subtle passage of currents. Yet the power of currents to move and control the seas is unmatched.

### How Currents Work

Currents are cohesive streams of seawater that circulate through the oceans. Some are short lived and small, while others are vast flows that take centuries to complete a circuit of the globe. [The Gulf Stream Current, which shows up in this temperature coded satellite image as a broad dark orange swath, has followed this course through the North Atlantic for millennia.] In contrast, the small eddy currents that spin off the Gulf Stream die out within a few months.

There are two distinct current systems in the oceans—surface circulation, which stirs a relatively thin upper layer of the sea, and deep circulation, which sweeps along the deep sea floor.

The dominant pattern of surface circulation is the gyre—a well-organized, roughly circular flow. Five enormous gyres spin in subtropical waters, two in both the Atlantic and Pacific Oceans, and one in the Indian Ocean. Smaller polar gyres stir the northern Atlantic and Pacific. One surface current circles endlessly around Antarctica.

These gyres are made up of currents set in motion by winds and gravity, and steered by the placement of the continents and the rotation of the Earth. Wind is the most important cause of surface currents. When strong, sustained winds blow across the sea, friction drags a thin layer of water into motion.

**Lloyd's Register Technical Association Session 1975-1976** Lloyd's Register Foundation, 1975-01-01 The Lloyd's Register Technical Association LRTA was established in 1920 with the primary objective of sharing technical expertise and knowledge within Lloyd's Register. Publications have consistently been released on a yearly basis with a brief interruption between 1938 and 1946. These publications serve as a key reference point for best practices and were initially reserved for internal use to maximise LR's competitive advantage. Today the LRTA takes a fresh approach focusing on collaboration by combining professional expertise from across LRF Group to ensure a frequent output of fresh perspectives and relevant content. The LRTA has evolved into a Group wide initiative that identifies, captures and shares knowledge spanning various business streams and functions. To support this modern approach the LRTA has adopted a new structure featuring representatives and senior governance across the business streams and the LR Foundation. The Lloyd's Register Technical Association Papers should be seen as historical documents representing earlier viewpoints and are not reflective of current thinking and perspectives by the current LR Technical Association. The Lloyd's Register Staff Association LRSA changed its name to the Lloyd's Register Technical Association LRTA in 1973.

**Concrete Solutions 2011** Michael Grantham, Viktor Mechtcherine, Ulrich Schneck, 2011-09-08 The Concrete Solutions series of International Conferences on Concrete Repair began in 2003 with a conference held in St Malo, France, in association with INSA Rennes, followed by the second conference in 2006 with INSA again at St Malo, France, and the third conference in 2009 in Padova and Venice in association with the University of Padova. Now in 2011 the event is being held in Dresden, Germany, and has brought together some 112 papers from 33 countries. Whereas electrochemical repair tended to dominate the papers in earlier years, new developments in structural strengthening with composites have been an increasingly important topic, with a quarter of the papers now focusing on this area. New techniques involving Near Surface Mounted (NSM) carbon fibre rods, strain hardening composites and new techniques involving the well established carbon fibre and polyimide wrapping and strengthening systems are presented. Seventeen papers concentrate on case studies which are all important in such conferences to learn about what works and what doesn't work on real structures. Thirteen papers are devoted to new developments in Non Destructive Testing (NDT). Other topics include service life modelling, fire damage, surface protection methods and coatings, patch repair, general repair techniques and whole life costing. This book is essential reading for anyone engaged in the concrete repair field, from engineers to academics and students, and also to clients who, as the end user, are ultimately responsible for funding these projects and making those difficult decisions about which system or method to use.
