Janssen, Jürgen Renn, 2022-07-29 Einstein's field equations of gravitation are a core element of his general theory of relativity. In four short communications to the Prussian Academy of Sciences in Berlin in November 1915 we can follow the final steps toward these equations and the resulting theory's spectacular success in accounting for the anomalous motion of Mercury's perihelion. This source book provides an expert guide to these four groundbreaking papers. Following an introductory essay placing these papers in the context of the development of Einstein's theory, it presents and analyzes in addition to the four papers of November 1915 a careful selection of critical excerpts from papers, letters, and manuscripts documenting the path that early on led Einstein to the field equations of the first November 1915 paper but then took a turn away from them only to lead back to them in the end. Drawing on extensive research at the Einstein Papers Project and the Max Planck Institute for History of Science, this volume traces the intricate interplay between considerations of physics and considerations of mathematics that guided Einstein along this path. It thus presents a concise yet authoritative account of how Einstein found his field equations, affording readers who are prepared to immerse themselves in these intricacies a unique glimpse of Einstein at work at the height of his creative prowess. Highlights of this journey in Einstein's footsteps include the crucial pages with detailed annotation from the Zurich Notebook, the record of Einstein's early search for a field equation with his mathematician friend Marcel Grossmann, and the Einstein-Besso manuscript documenting Einstein's attempts with his friend and confidant Michele Besso to explain the Mercury anomaly on the basis of the equations that he and Grossmann had eventually settled on in the Zurich Notebook.

Quinta Essentia - Part 2,3,4 (6 x 9) Riccardo Storti, 2010-02-27 A compilation of the core concepts in the Quinta Essentia series Part 2 3 4 in a convenient reference handbook *Electricity and Magnetism*, 2013 **Scientific and Technical Aerospace Reports**, 1991 **Electricity and Magnetism**, 1993

Physics Exam-builder for HKDSE Y. M. Yeung, 2020-12-21 Book 4 deals with the topics on the section electricity and magnetism which carries a substantial weight on the HKDSE syllabus and examination. Electricity plays an important role in the modern world in every sector of human activities. Every person nowadays has to use electrical appliances every day. Some general knowledge about electrical safety is essential. As a subject learning this topic at DSE level lays the foundation for further studies in the field of science, engineering, and other innovative technological development. It is customary to name this section of the syllabus as electricity and magnetism. In fact, there is a close relationship between them. An electric current produces a magnetic field, and magnetic fields interact to produce magnetic forces in motors. A changing magnetic field produces an induced e.m.f. which is the basic physics principle underlying the production of electricity using a.c. generators in power stations. The magnetism of a permanent magnet is in fact due to atomic currents caused by orbiting and spinning electrons. Hence, except for static charges, the name electromagnetism is used to describe various phenomena relating currents, changing currents, magnetic fields, and changing magnetic fields.
