

DEFINITIONS

Population Density: this is the number of people per unit area. The density of population is obtained by dividing the total population of a country (or any region) by the total area of the country (or region). The density of population for a country can be misleading as it does not show variations between densely populated regions and those areas that are almost unpopulated. Population densities are often shown on choropleth maps.

Population Distribution: describes the way people are located within an area. When plotted on a map, this can reveal those areas that have a high population and those where few people live, which maps of population density fail to show. One of the ways of plotting this information is by means of a dot map.

QUESTIONS

1.
 - density is very high in Asia
 - density seems to be higher in countries with a large population
 - eg. China, India, United States, Indonesia, Brazil, Pakistan, Nigeria, Bangladesh, Russia, Japan, Mexico (these are the top 11 most populated countries in order)
2.
 - population is heavily distributed to the west (in Europe) and the south (in Asia)
 - there are many potential reasons for this:
 - o climate and weather patterns
 - o access to resources
 - o fertility of land
 - o access to freshwater
 - o access to oceans/sea for transportation/shipping of goods
 - o colonial patterns
 - o religion – e.g. Nigeria, Indonesia, Philippines – both Islam and Roman Catholicism promote large families and reject birth control
