Annual Review of

**Microbiology** Charles Egolf Clifton, 1995 Publishes original critical reviews of the significant literature and current development in microbiology

**Geochemical and Biogeochemical Reaction Modeling** Craig M. Bethke, 2010-12-09 This book provides a comprehensive overview of reaction processes in the Earth's crust and on its surface both in the laboratory and in the field. A clear exposition of the underlying equations and calculation techniques is balanced by a large number of fully worked examples. The book uses The Geochemist's Workbench modeling software developed by the author and already installed at over 1000 universities and research facilities worldwide. Since publication of the first edition the field of reaction modeling has continued to grow and find increasingly broad application. In particular the description of microbial activity, surface chemistry and redox chemistry within reaction models has become broader and more rigorous. These areas are covered in detail in this new edition which was originally published in 2007. This text is written for graduate students and academic researchers in the fields of geochemistry, environmental engineering, contaminant hydrology, geomicrobiology and numerical modeling.

**Industrial Biotechnology** Christoph Wittmann, James C. Liao, 2017-04-10 The latest volume in the Advanced Biotechnology series provides an overview of the main production hosts and platform organisms used today as well as promising future cell factories in a two volume book. Alongside describing tools for genetic and metabolic engineering for strain improvement the authors also impart topical information on computational tools, safety aspects and industrial scale production. Following an introduction to general concepts, historical developments and future technologies the text goes on to cover multi purpose bacterial cell factories including those organisms that exploit anaerobic biosynthetic power. Further chapters deal with microbes used for the production of high value natural compounds and those obtained from alternative raw material sources concluding with eukaryotic workhorses.
