fractures interfragmentarily in order to make them resistant to the tensile force of muscles and the force resulting from  
acceleration and deceleration This can be best achieved by the use of cable tension bands as a traction mechanism The cable  
tension band is in terms of stability of fractures far superior to the conventional rigid cerclage wire which has been widely  
used in osteosynthesis for over 100 years The author explains the biomechanics of the tension band in detail Theoretical  
findings are confirmed by clinical test results All osteosynthetic techniques which can be carried out with cables are  
described giving details of operation instructions Errors and risks are always pointed out A reference book and operative
