Tactical Combat Casualty Care Guidelines 28 October 2013 All changes to the guidelines made since those published in the 2010 Seventh Edition of the PHTLS Manual are shown in bold text The most recent changes are shown in red text These recommendations are intended to be guidelines only and are not a substitute for clinical judgment

Basic Management Plan for Care Under Fire

- 1 Return fire and take cover
- 2 Direct or expect casualty to remain engaged as a combatant if appropriate
- 3 Direct casualty to move to cover and apply self aid if able
- 4 Try to keep the casualty from sustaining additional wounds
- 5 Casualties should be extricated from burning vehicles or buildings and moved to places of relative safety Do what is

necessary to stop the burning process 6 Airway management is generally best deferred until the Tactical Field Care phase 7 Stop life threatening external hemorrhage if tactically feasible Direct casualty to control hemorrhage by self aid if able Use a CoTCCC recommended tourniquet for hemorrhage that is anatomically amenable to tourniquet application Apply the tourniquet proximal to the bleeding site over the uniform tighten and move the casualty to cover **USMC COMBAT**

INTRODUCTION Military Working Dogs (MWDs) are at the same risk for injury as their human counterparts and when they are severely injured best practice for resuscitation mirrors those recommended for humans. A recent study of trauma in MWDs shows that explosions gunshot wounds and lacerations account for the vast majorities of injuries sustained within the Central Command area of responsibility. In severe cases these mechanisms of injuries could require resuscitation with blood products. Hemostatic resuscitation has been shown in many species to be superior to resuscitation with crystalloids or synthetic colloids and should therefore be considered the first choice resuscitation product in severely wounded MWDs. **The Water Footprint Assessment Manual** Arjen Hoekstra, Ashok K. Trauma Team Dynamics Lawrence Marshall Gillman, Sandy Widder, 2025-09-12 The majority of medical errors are non technical in nature stemming from faulty decision making, asynchronous information gathering, lack of situational awareness, and ineffective communication and team leadership. Reviews of accidents from other high risk industries including the airline industry have had similar findings. This led the National Aeronautics and Space Administration NASA and the airline industry to develop crew, now crisis resource management CRM training. These team based training strategies address non technical skills to counteract human error and improve team and patient safety. Medicine has begun adapting this

training especially within the realms of anesthesia and critical care Trauma surgery has been slower to utilize this work however simulation based training is increasing in popularity The first edition of Trauma Team Dynamics was a revolutionary book in the field of trauma care It was the first text that integrated the complexities of trauma care but illustrated how these could be streamlined and improved through a team based focus and training CRM and team based training has grown substantially in the past six years since this text was conceived and there have been significant developments both in the breadth of the training as well as refinement in the topics covered teaching methods utilized and strategies employed to overcome the multitude of challenges still faced in this area The second edition of this text expands greatly on the initial CRM topics covered in the opening section of the book Hot topics in CRM training including the concepts of followership and conflict resolution and highlights strategies such as mindfulness and others to manage stress and reduce burnout are discussed The text also expands into novel areas of trauma care including less invasive bedside endovascular treatments such as REBOA Resuscitative Endovascular Balloon Occlusion of the Aorta and a more in depth discussion of teleresuscitation and trauma care in austere environments Featuring 28 new chapters the second edition of Trauma Team Dynamics is written by experts in trauma critical care emergency medicine nursing respiratory therapy and pre hospital care and include NASA and United States military affiliated experts It is intended for use as both a day to day clinical resource and a reference text and includes self assessment questions as well as guidance on CRM curriculum design and implementation
