reflection on key questions before during and after reading most chapters STEM Education for High-Ability Learners
Bronwyn MacFarlane, 2021-09-23 *STEM Education for High Ability Learners* Designing and Implementing Programming
focuses on the rigorous articulation of quality STEM education programming to develop STEM talent among high ability and
gifted learners The intent of this book is to provide a comprehensive resource for educators designing and implementing
each of the supports within STEM education by providing a discussion of each critical component for inclusion in a planned
coherent and high quality sequenced system This edited volume provides a cutting edge discussion of best practices for
delivering STEM education by experts in the field The contributing authors provide a differentiated discussion and
recommendations for the learning experiences of gifted students in STEM education programs *Making the Connection*
Marilyn Paula Carlson, Chris Rasmussen, 2008 The chapters in this volume convey insights from mathematics education
research that have direct implications for anyone interested in improving teaching and learning in undergraduate
mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math
department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of
precalculus through differential equations students mathematical thinking and problem solving abilities and students
understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs
that have been successful in supporting students continued study of mathematics The authors provide many examples and
ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice
University mathematicians and community college faculty spend much of their time engaged in work to improve their
teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new
approaches to support student learning and their continuation in mathematics Over the past 30 years research in
undergraduate mathematics education has produced knowledge about the development of mathematical understandings and
models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice
We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing
improvements in undergraduate mathematics curriculum and instruction **Alternative Strategies for Evaluating**
Student Learning Michelle V. Achacoso, Marilla D. Svinicki, 2005-03-17 Although new forms of learning call for new forms of
assessment many faculty struggle to find different ways of testing their students achievements This issue introduces readers
to both theory and practical examples of innovations in assessment in the college classroom Examples include authentic
testing testing with multimedia portfolios visual synthesis and performance based testing among others Contributors also
argue that student performance on exams can be improved by techniques that can be implemented both before and after the
exam to make the students better learners This is the 100th volume of the Jossey Bass quarterly report series New Directions
