2. The groundwater may get used faster than it can be recharged, causing the water table to drop below the well. Water shortages would occur.
1. They control the flow of water, capturing and storing a river's flow as well as rain and melting snow.
2. It is released for irrigation and municipal uses, and is used to produce hydroelectric power and for recreation.
3. Salt water is heated until it evaporates. Then it is condensed, and the resulting freshwater is collected.
4. Some desalination plants use solar energy, which is slow but inexpensive and renewable. Others use fuel, which is faster but more expensive.
5. They carry freshwater from where it is plentiful to where there is a great demand for it, such as to cities and agricultural areas.
